1	Introduction	1
1.1	Context	1
1.2	Motivation	2
1.3	Objectives	4
1.3.1	General Objective	4
1.3.2	Specific Objectives	4
1.4	Methodology	5
1.5	Thesis Structure	6
2	Literature Review	7
2.1	Diabetic Retinopathy	7
2.1.1	Retinal basic knowledge	7
2.1.2	Examination of the fundus	8
2.1.3	Normal fundus findings in general	10
2.1.4	Manifestation of the disease	10
2.2	Image Processing	13
2.2.1	Color spaces	13
2.2.2	Correcting imaging defects: neighborhood averaging	16
2.2.3	Histogram equalization	18
2.2.4	Edge detection	20
2.2.5	Multiband images segmentation	21
2.3	Pattern Recognition and Classification	23
2.3.1	k -nearest neighbor regression	23
2.3.2	Fuzzy c-means	24
2.3.3	Artificial neural networks	25

2.4	Performance indicators	26
2.5	State of the Art	28
3	Design and Implementation	31
3.1	Materials	32
3.2	Blood Vessels Localization	33
3.3	Optic Disc Localization	35
3.3.1	Position regression	36
3.3.2	Preprocessing	37
3.3.3	Vessel analysis	37
3.3.4	Template based feature extraction	39
3.3.5	Training phase	41
3.3.6	Search strategy	43
3.4	Bright Lesions Detection	43
3.4.1	Preprocessing	44
3.4.2	Retinal image segmentation	47
3.4.2.1	Coarse segmentation	48
3.4.2.2	Fine segmentation	49
3.4.3	Feature extraction and selection	51
3.4.4	Region level classification	54
3.5	Red Lesions Detection	54
3.5.1	Preprocessing	55
3.5.2	Bright lesions, vessels and optic disc extraction	56
3.5.3	Lesion classification	57
4	Results and Discussion	61
5	Conclusions and Future Work	67
	Bibliography	71
