Resumen	i
Abstract	ii
1 Introduction	1
1.1 Motivation	1
1.2 Objectives and scopes	2
1.3 Organisation	3
1.3.1 Discrimination and characterisation of rock textures	3
1.3.2 Simulation and modelling with input visual data	4
1.3.3 General structure	4
2 Background	5
2.1 Geological characterisation and modelling	5
2.1.1 General steps	5
2.1.2 Geological characterisation	6
2.1.3 Geostatistical modelling	8
2.1.4 Multiple-point statistics	9
2.2 Textures	11
2.2.1 Texture analysis	12
2.2.2 Texture similarity metrics	14
2.2.3 Texture synthesis	17
3 Texture characterisation	20
3.1 Motivation	20
3.1.1 Organisation	21
3.2 Problem description	21
3.3 Variographic map characterisation	23
3.4 Compact variogram representation	25
3.4.1 Compact variogram distribution	28
3.5 Classification method	29
3.5.1 k-Nearest Neighbours	29
3.5.2 Comparison metrics	30
3.6 Texture classification scheme	32
3.6.1 Preprocessing	34
3.7 Results	36

3.7.1	Rock texture database	37
3.7.2	Improved rock texture database	40
3.8	Other applications	42
3.8.1	General texture database 1	42
3.8.2	General texture database 2	43
3.8.3	Foam image database 1	46
3.8.4	Foam image database 2	47
3.9	Conclusions and future works	50
3.9.1	Practical considerations	51
3.9.2	Future works	52
4	Texture synthesis as geostatistical simulation	53
4.1	Motivation	53
4.1.1	Organisation	54
4.2	Global similarity energy	54
4.3	Optimisation procedure	55
4.4	Generalised texture synthesis	57
4.4.1	Multi-level synthesis	57
4.4.2	Robust optimisation	58
4.4.3	Multivariate case	58
4.5	Conditioning and histogram reproduction	60
4.5.1	Histogram reproduction	60
4.5.2	Conditioning	60
4.6	Results	63
4.6.1	Univariate texture synthesis	63
4.6.2	Multivariate texture synthesis	68
4.6.3	Histogram reproduction and conditioning	73
4.7	Conclusions and future work	74
4.7.1	Future work	76
5	3D optimisation-based multiple-point simulation	77
5.1	Motivation	77
5.1.1	Organisation	78
5.2	Optimisation-based procedure extensions	78
5.2.1	Random value sampling	78
5.2.2	Perceptual similarity synthesis metric	79
5.2.3	Categorical case	82
5.3	Extending the information included	84
5.3.1	Global histogram matching	84
5.3.2	Local histogram matching	84
5.3.3	Conditioning	85
5.3.4	Variability of training data	85
5.4	3D modelling	86
5.5	Results	88
5.5.1	Random value sampling	88
5.5.2	Perceptual similarity synthesis	90

5.5.3	Extending the information included	93
5.5.4	3D modelling	97
5.6	Conclusions and future work	102
5.6.1	Practical considerations	103
5.6.2	Future works	103
6	Conclusions	105
6.1	Future works	106
	Bibliography	108
