## Contents

1 Introduction  

2 Literature Review  
   2.1 Resilience and reliability in power systems  
   2.2 Optimization via Simulation Algorithms  
   2.3 Sample Average Approximation Estimators  

3 Industrial Strength COMPASS  
   3.1 NGA  
   3.2 COMPASS  
   3.3 R&S  
   3.4 ISC Parameters  

4 Deterministic Resilient Network Design Problem Formulation  
   4.1 Nomenclature  
   4.2 DC Optimal Power Flow  
   4.3 Unit Commitment  

5 Earthquakes and Fragility Curves  
   5.1 Spatial Distribution and Intensity Distribution  
   5.2 Fragility Curves and Components Failures  

6 Combined Framework  
   6.1 Reliability Model  
   6.2 Resiliency Model  
   6.3 Combined Aspects  

7 Results and Analysis  
   7.1 Validating ISC: The optimal queue capacity allocation  
   7.2 14 Busbar Case Study IEEE  
   7.3 Improving Power System Reliability  
      7.3.1 Results  
   7.4 Improving Power System Resiliency: FU and SAA  
      7.4.1 Results  
      7.4.2 Analysis
