

## Endometrial carcinoma. The experience of the Hospital San Juan de Dios

### Carcinoma endometrial. Experiencia del Hospital San Juan de Dios.

Saavedra,

Saavedra,

Muster,

Since april 1957 to april 1986, the Gynecologic Oncologic Unit of San Juan de Dios Hospital, Santiago, registered 255 cases of endometrial carcinoma. 48 cases were clinically etapified because of no previous pelviabdominal surgical exploration in: Stage I: 27 cases (56.3%); II: 6 (12.5%); III: 7 (14.6%); IV: 1 (2.1%). The remainder 207 cases were surgically etapified: I: 155 cases (74.9%); II: 10 (4.83%); III: 31 (14.92%) and IV: 11 cases (5.32%). Fourteen patients of the first group and 2 of the second one received palliative therapy. Primary therapy was performed with curative intention in 237 cases (34 clinically etapified and 203 surgically etapified). Stage I: 181 cases (76.37%), (26 clinical, 155 surgical); Stage II: 16 (4.92%). (6.10); Stage III: 31 (14.33%), (2.29) and Stage IV: 9 cases (4.4%), (0 + 9). Four different kinds of therapies were performed: A: only surgery in 153 cases (65%); B: surgery plus radiation in 49 (21%); C: radiation plus surgery in 20 cases (8.44%) and D
