

# Photoreactivating capacity in *Clostridium butyricum* and *Clostridium acetobutylicum*

Carrasco, Alicia

No difference in survival was observed when u.v. irradiated clostridial cells were subsequently incubated in the dark or exposed to photoreactivating light. This suggests that photoreactivation does not occur in *Clostridium butyricum* and in *Clostridium acetobutylicum*. Copyright © 1989, Wiley Blackwell. All rights reserved
