

The concept of atypically of antipsychotics El concepto de atipicidad en los antipsicoticos

Silva,

This article review pharmacological aspects of antipsychotics drugs. The concepts of typical and atypical antipsychotics drugs is discussed. An atypical neuroleptic is a drug that has antipsychotic efficacy, with minimal extrapyramidal side effects and does not cause tardive dyskinesia or causes a small elevation of serum prolactine levels. Several hypothesis about the molecular mechanisms that explain atypically are considered.
