# Experimental Validation of Decentralized Reinforcement Learning of Robot Behaviors

## 5.1 Experimental Validation

### 5.2 Three-Dimensional Mountain Car

- **5.2.1 Centralized Modelings**
- **5.2.2 Proposed Decentralized Modelings**
- **5.2.3 Performance Index**
- **5.2.4 RL Algorithm and Optimized Parameters**
- **5.2.5 Results and Analysis**

### 5.3 Ball-pushing

- **5.3.1 Centralized Modeling**
- **5.3.2 Decentralized Modeling**
- **5.3.3 Performance index**
- **5.3.4 RL algorithm and optimized parameters**
- **5.3.5 Physical setup**
- **5.3.6 Results and analysis**

### 5.4 Ball-Dribbling

- **5.4.1 Proposed Decentralized Modeling**
- **5.4.2 Centralized Modeling**
- **5.4.3 Performance Indices**
- **5.4.4 RL Algorithm and Optimized Parameters**
- **5.4.5 Results and Analysis**

### 5.5 SCARA Real-Time Trajectory Generation

- **5.5.1 Decentralized Modeling**
- **5.5.2 Performance Index**
- **5.5.3 RL Algorithm and Optimized Parameters**
- **5.5.4 Results and Analysis**

## 5.6 Discussion

## 5.7 Summary

### 6 Accelerating Decentralized Reinforcement Learning

#### 6.1 DRL and Transfer Knowledge Overview

#### 6.2 Literature Review

#### 6.3 Proposed KT-based DRL

- **6.3.1 Control Sharing (CoSh)**
- **6.3.2 Nearby Action Sharing (NeASh)**

#### 6.4 Experimental Validation

- **6.4.1 Inwalk Kicking**
- **6.4.2 Ball-Dribbling**

#### 6.5 Discussion

#### 6.6 Summary

### 7 Conclusions and Future Direction

### 8 Bibliography
