

# Demo: A prototype for a platoon-based cyclist cooperative system

Salamanca, Juan

Céspedes, Sandra

Vinasco, Daniel

Yanez, Alexis

© 2016 IEEE. Innovative solutions for smart transportation involve the integration of communication technologies, mobile applications, control mechanisms, and human-to-machine interfaces. In this demo we present the prototype of a coordinated cycling scheme for smart bicycles, which is an example of the aforementioned integration. We include results from experimental studies and future applications of our proposed system.
