1	Introduction	4
1.1	Global and Chile Energy Scenario	4
1.2	Carbon-Air Solid Oxide Fuel Cells (CA-SOFCs)	7
1.3	Project Aim	10
2	Fundamentals of Electrochemistry	11
2.1	Thermodynamics Principles	11
2.1.1	Enthalpy of Reaction	13
2.1.2	Entropy of Reaction	14
2.1.3	Gibbs Free Energy	14
2.1.4	Open Circuit Voltage (OCV) or Nernst Potential	15
2.2	Kinetic Principles	15
2.2.1	Activation Overpotential	16
2.2.2	Concentration Overpotential	17
2.2.3	Ohmic Potential Losses	19
2.2.4	Fuel Cell Power Density and Heat Generation	19
2.2.5	Voltage Efficiency, Fuel Utilization and SOFC Efficiency	20
2.3	Electrochemical Impedance Spectroscopy	21
2.3.1	Fundamentals of EIS	21
2.3.2	Complex Non-Linear Least Square (CNLS) Analysis	30
2.3.3	EIS Data Validation: Kramers-Kronig Relations	31
2.3.4	Equivalent Circuit Determination	33
3	Literature Review	36
3.1	Solid Oxide Fuel Cells	36
3.1.1	Electrolyte Materials	37
3.1.2	Cathode Materials	43
3.1.3	Anode Materials and Fuels	46
3.1.4	Mechanical Properties of Anode Materials	53
3.2	Carbon-Air Solid Oxide Fuel Cells	60
3.2.1	Molten Electrolytes	62
3.2.2	Carbon-air Fuel Cells Based on Carbon Gasification	66
3.2.3	Gür's Carbon-Air Solid Oxide Fuel Cell	69
3.3	Hypothesis	71
3.4	Thesis Objectives	71

4	Experimental	73
4.1	Synthesis of CMO Nanopowders	73
4.2	Fabrication of CMO and CeO ₂ Dense Pellets	74
4.3	Crystalline Structure and Chemical Composition of CMO	75
4.4	Specific Surface Area and Catalytic Activity of CMO	75
4.5	Mechanical Strength Tests	75
4.5.1	Determination of the Young's Modulus	75
4.5.2	Determination of the Vickers Microhardness and Fracture Toughness	76
4.6	Electrical Conductivity Measurements	76
4.7	Fabrication of Symmetric-Cells and Fuel Cells	79
4.7.1	Fabrication of Symmetric-Cells	79
4.7.2	Fabrication of Fuel Cells	80
4.8	EIS and Current Density/Power Density-Potential Measurements	83
4.8.1	EIS Measurements	83
4.8.2	Current Density/Power Density-Potential (<i>j</i> /P-E) Curves	85
5	Molybdenum-doped Ceria: Material Characterization, Mechanical and Electrical Properties	87
5.1	Determination of the Calcination Temperature of CMO as-Prepared Powders	87
5.2	Characterization of the CMO Crystallinity and Microstructure	90
5.3	Chemical Characterization of CMO	94
5.4	Specific Surface Area and Catalytic Activity of CMO.	96
5.5	Mechanical Properties of the CMO	96
5.6	Electrical Conductivity of CMO	100
6	CMO-based Anodes: Symmetric-Cell Tests	108
6.1	Symmetric-Cells Characterization	108
6.1.1	Thickness and Microstructure of Cell Components	108
6.1.2	Chemical Stability of Cell Components	111
6.2	EIS Data Validation: Kramers-Kronig Test	112
6.3	EIS Analysis in Air Atmosphere	115
6.3.1	EIS Data Analysis	115
6.3.2	Equivalent Electrical Circuit	119
6.4	EIS Analysis in Hydrogen Atmosphere	129
6.4.1	EIS Data Analysis	129
6.4.2	Equivalent Electrical Circuit	131
6.5	Symmetric-Cells Analysis After EIS Tests	136
6.5.1	Cells Tested in Air Atmosphere	136
6.5.2	Cells Tested in Hydrogen Atmosphere	139
7	CA-SOFC Preliminary Tests	142
7.1	SOFC Pre-Tests Characterization	142
7.2	SOFC Polarization and Power Density Curves	146
7.3	SOFC Post-Tests Characterization	147
8	General Discussion	149
9	Conclusions	153

10 Future Work	154
Bibliography	155
A Mechanical Properties	176
A.1 Elastic Modulus	176
B EIS Analysis in Air Atmosphere	177
B.1 Results Obtained from Equivalent Electrical Circuit Fit under Air Atmosphere . . .	177
C EIS Analysis in Hydrogen/Water Atmosphere	179
C.1 Results Obtained from Equivalent Electrical Circuit Fit under H ₂ -H ₂ O Atmosphere	179
