

TABLE OF CONTENTS

ABSTRACT	i
RESUMEN	iii
ACKNOWLEDGMENTS	v
TABLE OF CONTENTS	vii
FIGURES INDEX	ix
TABLES INDEX.....	xiv
CHAPTER 1: INTRODUCTION.....	1
1.1 Structure of this thesis	1
1.2 Introduction and motivation	2
1.3 Working hypotheses	5
1.4 Objective	7
1.5. Tectonic setting and Scotia region evolution	8
1.5 Geologic setting.....	13
1.7 Glacial history and Quaternary geomorphology	17
1.8 The Magallanes-Fagnano fault system.....	25
1.9 MFS main fault trace and secondary structures.....	30
1.10 Seismicity in Southern Patagonia region.....	34
1.10.1 Historical and instrumental seismicity	34
1.10.2 Paleoseismicity and geomorphologic evidence of the MFS activity.....	39
1.11 Climate and vegetation.....	57
1.12 Geophysics framework.....	42
1.13 Lake Fagnano	44
CHAPTER 2: METHODOLOGY.....	47
2.1 Literature review and desktop work	47
2.2 Fieldwork and characterization of the study area.....	48
2.3 Drone-acquired Structure from Motion (SfM) photogrammetry and geomorphic models.	52
2.4 Geological slip-rate measure in geomorphological markers	55
CHAPTER 3: THE NARROWEST AND SIMPLEST STRIKE-SLIP PLATE BOUNDARY ON EARTH?	57
CHAPTER 4: STUDY CASES	74

4.1 Chilean Slip sites: Mount Hope area and Azopardo valley	78
4.2 Chilean slip sites: Deseado lake zone.....	92
4.3. Argentine Slip site: The Rio Turbio and the Rio Lainez area	96
CHAPTER 5: DISCUSSIONS	106
5.1 Faults locations and geomorphologic evidence of active tectonic	106
5.2 Offsets measurement and uncertainties estimations	115
5.3 Seismic potential and seismic hazard implications	118
5.4 Geological versus Geodetic data-based slip-rates	123
CHAPTER 6: CONCLUSIONS.....	128
6.1 Main conclusion of this work	128
6.2 Suggestions for future work	132
BIBLIOGRAPHY	133
ANNEXED.....	142
Annexed I: Secondary faulting in the MFS area	142
Annexed II: Structure for Motion derived models' details.....	145
Annexed III: MFS offsets in ALOSPALSAR 12.5 m DEM	148
