

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Proposed Hypothesis	2
1.3	General Objective	2
1.3.1	Specific Objectives	2
1.4	Contributions	2
1.5	Structure of the Document	3
2	Co-optimising network and storage systems with high operational resolution	5
2.1	State of the Art	5
2.1.1	Transmission planning under uncertainty	5
2.1.2	Flexibility in the expansion problem	6
2.1.3	Storage systems in the expansion problem	7
2.1.4	Decomposing methods	8
2.2	Co-optimisation model	9
2.2.1	Objective function	9
2.2.2	Main Investment Constraints	10
2.2.3	Main Operational Constraints	10
2.3	Column Generation Approach	12
2.3.1	Column Generation Algorithm	14
2.3.2	Representative Day-Based Dantzig Wolfe Decomposition	15
2.4	IEEE-RTS Case Study - Validation model	17
2.4.1	Input Data	17
2.4.2	Case studies	17
2.5	IEEE 118-busbar System Case Study	23
2.5.1	Input data	23
2.5.2	Results and discussion	23
3	Australian Case Study	31
3.1	Mathematical model	31
3.1.1	Master problem	31
3.1.2	Slave problem	32
3.1.3	Planning Model with column generation	33
3.2	Study Case	35
3.2.1	Operational model	37

3.2.2	Investment model	37
3.2.3	Scenarios	38
3.2.4	Results	39
4	Conclusions and Further Work	49
4.1	Conclusions	49
4.2	Further Work	50
	Bibliography	50
