

Table of Contents

Introduction	1
1. A Review on DTA	4
1.1. The interest on the DTA approach	4
1.1.1. Origin of the DTA concept	4
1.1.2. Why DTA?	5
1.1.3. When is DTA a good approach to take?	5
1.1.4. STA vs DTA	6
1.2. A general bibliographic review on DTA modelling	7
1.2.1. First expectations regarding DTA earlier developments	7
1.2.2. Models Classifications Criteria	8
1.2.3. Modelling and Solving approaches of DTA problems in the literature	11
1.2.4. Other definitions derived from DTA	15
1.2.5. DTA and Public Transport	16
1.2.6. Stochasticity and DTA	17
1.3. Two research lines regarding Stochasticity: The motivation of this Doctoral Thesis	19
1.3.1. Addison and Heydeckers’s research	19
1.3.2. Baillon and Cominetti’s research	21
2. The first step: The Markovian Dynamic Traffic Assignment Model for the Multiple Origins and a Single Destination General Case	24
2.1. From the “one-to-one” to the “many-to-one” case: Focusing the travel on the destination	25
2.2. Reasonable Arcs	26
2.3. Building the MDTA model for the multiple origins and a single destination case	26
2.3.1. The Demand Profile	27
2.3.2. The Traffic Model	27
2.3.3. The Arc-Choice Model	28
2.4. The MOSD-MDTA Algorithm	30
2.5. How the <i>MOSD-MDTA algorithm</i> works: an illustrative example	34
2.6. Computational Implementation of the <i>MOSD-MDTA algorithm</i>	38

2.6.1.	The outputs: The behaviour of inflow rates, outflow rates and queue lengths	39
2.6.2.	A technical aspect: The timestep size Δt	41
3.	The Markovian Dynamic Traffic Assignment Model for the Multiple Origins and Multiple Destinations General Case	45
3.1.	From the “many-to-one” to the “many-to-many” case: Different types of motorists within an arc	46
3.2.	Reasonable Arcs towards a particular destination	47
3.3.	Building the MDTA model for the multiple origins and multiple destinations case	47
3.3.1.	The Demand Profile	47
3.3.2.	The Traffic Model	48
3.3.3.	The Arc-Choice Model	49
3.4.	The MOMD-MDTA Algorithm	51
3.5.	How the <i>MOMD-MDTA algorithm</i> works: an illustrative example	56
3.6.	Computational Implementation of the <i>MOMD-MDTA algorithm</i>	60
3.6.1.	The outputs: the behaviour of inflow rates, outflow rates and queue lengths going to each destination	61
3.6.2.	A technical aspect: The dispersion parameter θ	68
4.	A glimpse of a work in development: Extending the Reasonability concept	72
4.1.	The expected set of reasonable arcs towards a destination	73
4.2.	The MDTA model for general transport networks and the expected reasonable arcs sets	73
4.2.1.	The Demand Profile	73
4.2.2.	The Traffic Model	74
4.2.3.	The Arc-Choice Model	74
4.3.	The MOMD-ERS-MDTA Algorithm	75
	Conclusion	79
	Bibliography	81
	Appendix	87
