Introduction	1
1 Preliminaries and Model Definition	8
1.1 Preliminaries	8
1.2 The Distributed Interactive Proofs Model	9
1.3 Other Communication Models.	12
1.3.1 Alice and Bob, 2-Party Communication.	12
1.3.2 The Simultaneous Messages Model	13
1.3.3 The Congest Model	15
1.3.4 Broadcast Congested Clique	16
1.4 Some Important Results	17
2 Protocols Using a Single Interaction	24
2.1 Degeneracy	24
2.2 Twins	26
2.3 Proper Interval Graphs	29
2.4 Chordal Graphs and Interval Graphs	32
2.5 Circular Arc Graphs	38
2.5.1 Proper Circular Arc	39
3 Protocols Using Multiple Rounds of Interaction	45
3.1 H -subgraph and H -minor	45
3.1.1 The Problem of H -freeness	48
3.2 Clique	49
3.3 Cograph	50
3.4 Distance Hereditary	56
3.5 Detection of Triangle-free Graphs	60
4 Lower Bounds	65
4.1 A dAM lower bound for the degeneracy	65
4.2 A dM lower bound for COGRAPH.	68
4.3 A general lower bound for public dAM	70
4.4 A lower bound for Symmetry	78
5 Shared versus Private Randomness	80

5.1	The Limits of Shared Randomness	81
5.2	Shared dAM versus Private dAM	85
5.3	Shared dMA versus Private dMA	88
5.3.1	The upper bound	91
5.3.2	The lower bound	92
	Conclusion	98
	Bibliography	101
A	Graph problems	107
