Contents

1. Introduction **1**
1.1. Motivation . . . 1
1.2. Objectives . . . 1
1.2.1. General objective . . . 1
1.2.2. Specific objectives . . . 1
1.3. Scope . . . 2

2. Background **3**
2.1. Aviation Background . . . 3
2.1.1. Planes . . . 3
2.1.2. Engine . . . 5
2.1.3. Engine worflow . . . 6
2.1.4. Fuel consumption . . . 7
2.2. Theoretical background . . . 8
2.2.1. Machine Learning . . . 8
2.2.2. Neural Networks . . . 9
2.2.3. Deep Neural Networks . . . 13
2.2.4. RNN Architecture . . . 13
2.3. Models used for prediction . . . 14
2.3.1. LSTM Architecture . . . 14
2.3.2. Polynomial regression . . . 16
2.3.3. Decision trees . . . 17
2.3.4. Gradient boosting . . . 18
2.4. Regularization techniques . . . 18
2.5. Metrics for evaluation . . . 19

3. Data description **23**
3.1. Data Samples . . . 24
3.2. Ranges . . . 24
3.3. Measurement Failures . . . 24

4. Methodology **26**
4.1. Literature review . . . 26
4.2. Neural network architecture . . . 27
4.3. Training of the model . . . 27
4.3.1. Data separation . . . 27
4.3.2. Normalization and windowing . . . 28

4.3.3. Training 29
4.4. Resources 30

5. Results and Discussion **31**
5.1. Data Exploration 31
5.1.1. Raw data plots 31
5.1.2. PCA and clustering techniques 33
5.2. Flight intervals results 34
5.3. Take off intervals results 35
5.4. PCA on the final data 35
5.5. Fuel consumption 37
5.6. Experiments on PCA results considering fuel consumption 38
5.7. Fuel consumption prediction 39
5.8. Anomaly detector 40
5.8.1. Motivation and justification of the model 40
5.8.2. Anomaly detector results 41

6. Conclusions and Remarks **48**

7. Future Work **50**

Bibliography **51**

8. Appendix **53**
8.1. A. Training and evaluation of LSTM NN model 53
8.2. B. Training and evaluation of linear regression model 55
8.3. C. Training and evaluation of decision trees model 56
8.4. D. Training and evaluation of gradient boosting model 57
