Table of Content

1. Introduction **3**
- 1.1. Hypotheses . . . 6
- 1.2. Project Goals . . . 7
  - 1.2.1. Specific Goals . . . 7
  - 1.2.2. Methodology . . . 8
- 1.3. Thesis Structure . . . 9

2. Introduction to the Modular Multilevel Matrix Converter (M3C) **10**
- 2.1. The Modular Multilevel Converters Family . . . 10
  - 2.1.1. Fundamental Structure of the MMCs . . . 11
  - 2.1.2. Trends and Current Challenges for MMCs . . . 13
- 2.2. The Modular Multilevel Matrix Converter (M3C) . . . 15
  - 2.2.1. Proposed Solutions based on M3C . . . 15
- 2.3. Summary of the Chapter . . . 18

3. Modelling of the M3C **19**
- 3.1. Current/Voltage Model of the M3C . . . 20
  - 3.1.1. Linear Transform and Reinterpretation of the Variables . . . 21
- 3.2. Voltage/Power Model of the M3C . . . 23
  - 3.2.1. T-SSCV Dynamic Model in Complex Form . . . 25
- 3.3. Steady-state Capacitor Voltage Oscillations in the M3C . . . 27
  - 3.3.1. Steady State T-SSCV Oscillations in the M3C . . . 27
- 3.4. Chapter Summary . . . 30

4. Overview of Conventional Control Strategies for M3C **31**
- 4.1. Stored Energy Control . . . 32
  - 4.1.1. Total Stored Energy Control . . . 32
  - 4.1.2. CCV Balancing Scheme . . . 33
  - 4.1.3. Mitigation of Low-frequency Oscillations . . . 34
- 4.2. Arm Current Regulation . . . 36
- 4.3. Local Balancing Control . . . 37
- 4.4. Chapter Summary . . . 37

5. Overview of Model Predictive Control Schemes for the M3C Control **39**
5.1. Finite Control Set MPC Schemes . . . 40
5.2. CCS-MPC approach for Power Electronics Control . . . 41
5.2.1. Resolution methods for CCS-MPC . . . 41
5.3. Control of MMCs based on Model Predictive Control . . . 42
5.3.1. Control of the M2C by FCS-MPC . . . 42
5.4. Overview of MPC schemes used for M3C Regulation . . . 43
5.4.1. FCS-MPC approach for the M3C . . . 43
5.4.2. Three-stage optimisation approach . . . 44
5.4.3. Generalised Approach for MMC Control with an Optimisation Stage 44
5.5. Chapter Summary . . . 45

6. Proposed Control Scheme for the M3C Based on CCS-MPC **47**
6.1. CCV Balancing Scheme Based on CCS-MPC . . . 48
6.1.1. Regulation of the Stored Energy Control Based on CCS-MPC . . . 49
6.2. Circulating Current Control Based on CCS-MPC . . . 53
6.2.1. CCS-MPC formulation . . . 53
6.2.2. Constraint Specification of the Proposed MPC problem . . . 54
6.2.3. Implementation of the Strategy . . . 58
6.3. Discussion . . . 60
6.4. Chapter Summary . . . 63

7. Simulation Results **64**
7.1. CCV-Balancing Scheme Performance . . . 66
7.1.1. Steady state performance at different weight costs . . . 66
7.1.2. EFM steady state performance with different CMV waveforms . . . 68
7.1.3. Dynamic ramp test in DFM operation . . . 71
7.1.4. Dynamic balancing test . . . 73
7.2. Saturation Scheme performance . . . 75
7.2.1. Performance of the Proposed Control Strategy during sudden Step Changes in the Output Port Currents . . . 75
7.2.2. Performance of the Strategy when CCVs constraints are active . . . 78
7.2.3. Performance of the Saturation Scheme-B Considering a Dynamic Balancing Test . . . 79
7.2.4. Comparison of Saturation Scheme-B with a saturation scheme based on upper-level adjustments . . . 79
7.3. Chapter Summary . . . 82

8. Experimental Validation **83**
8.1. Experimental Set-up . . . 83
8.1.1. Control Platform . . . 83
8.1.2. DSP Board . . . 84
8.1.3. Power Stage . . . 86

8.2. CCV Balancing Scheme Based on CCS-MPC 88
8.2.1. Steady Operation Performance 89
8.2.2. Dynamic Performance of the Strategy 92
8.3. Circulating Current Control Based on CCS-MPC 97
8.3.1. Performance of the MPC strategy Considering Variable Voltage and Frequency in Output Port. 99
8.3.2. Comparison of Performance Achieved by the Proposed Saturation Schemes. 100
8.4. Chapter Summary 105

9. Summary and Conclusions **106**
9.1. Contributions and Future Work 109
9.1.1. Journal Publications 109
9.1.2. Conference Publications 109
9.1.3. Future Work 111

Bibliography **123**

Annexed **125**
