Abstract	3
Resumen	5
Acknowledgments	7
1 Introduction	17
1.1 The Problem	18
1.1.1 Facts	18
1.1.2 The Problem	20
1.2 Objectives	21
1.3 Outline	22
2 Basic Concepts	23
2.1 Lesson Authoring Context	23
2.2 Learning Objects	25
2.2.1 Origins	25
2.2.2 Learning-Object Definition	26
2.3 Learning-Object Organization	27
2.3.1 Learning-Object Hierarchy Models	27
2.3.2 Learning-Object Sequencing Models	29
2.3.3 Visual Structures for Learning Objects	30
2.4 Learning-Object Indexing	31
2.5 Learning-Object Repositories	32
2.6 Summary	34
3 Learning-Object Metadata	35
3.1 IEEE LOM	35
3.2 LOM Characteristics	37
3.2.1 Data Types of LOM Elements	37
3.2.2 Educational Metadata	39
3.2.3 Objectiveness and Context Dependency of LOM elements	39
3.3 LOM Usage	40
3.3.1 LOM Creation	40
3.3.2 State of existing LOM Instances	42
3.3.3 LOM Usefulness	43
3.3.4 Conclusion	43
3.4 Supporting LOM Generation	44
3.4.1 Templates and Editors	44
3.4.2 Information Sources for automatic LOM Generation	45

3.4.3	Generation Techniques based on Content Analysis	46
3.4.4	Generation based on Context Analysis	48
3.4.5	Conclusion	50
3.5	Supporting LOM Validation	50
3.5.1	LOM Completeness	51
3.5.2	LOM Correctness	51
3.5.3	LOM Accessibility	53
3.5.4	Conclusion	54
3.6	Supporting Learning-Object Retrieval with LOM	54
3.6.1	Keyword Queries for Learning Object Retrieval	54
3.6.2	Semantically Rich Queries	55
3.6.3	Query Result Processing	59
3.6.4	Conclusion	61
3.7	Summary	61
4	The Learning-Object Metadata Usage Problem	63
4.1	Problem Statement	63
4.2	Existing Approaches	64
4.3	Remaining Issues	65
4.4	Work Hypothesis	66
4.5	Work Strategy	67
4.6	Case Study	67
4.7	Conclusion	68
5	Introducing Human LOM Usage into Lesson Authoring	69
5.1	Organizing a Lesson with Learning Objects	70
5.2	Lesson Graph	70
5.3	Learning-Object Graph	71
5.3.1	Existing Types for the <code>relation</code> LOM Category	72
5.3.2	Type Proposal for the <code>relation</code> LOM Category	73
5.4	Authoring a LO Graph	76
5.4.1	LO as Node	76
5.4.2	Nested LO Graphs	78
5.5	LOM and LO Graphs	78
5.5.1	Instantiating LOM during Lesson Authoring	78
5.5.2	Characterizing LOs with LOM	82
5.6	LO Sharing and Retrieval in a LO Graph	83
5.6.1	Seamless Sharing of LOs when Authoring a Lesson	83
5.6.2	Seamless Sharing of LOs when Modifying Colleague's Lesson	84
5.6.3	Seamless Retrieval of LOs during Lesson Authoring	84
5.7	System Deployment	86
5.8	Conclusion	87
6	Processing LOM during Lesson Authoring	89
6.1	Classical Approach	89
6.2	Diffusion-based approach	91
6.2.1	Context Diffusion	91
6.2.2	Conceptual Model	92
6.2.3	Framework	93
6.3	Generic Propagation Protocol	94
6.3.1	CMV Update Process Characteristics	94

6.4	CMV Model Examples	98
6.4.1	Attribute Similarities and Value Suggestion	98
6.4.2	Graph Consistency and Value Restriction	101
6.5	Context Diffusion Impact	110
6.6	Framework Implementation	111
6.6.1	Avoiding Propagation Side-Effect	111
6.6.2	Java Library	112
6.7	Conclusion	112
7	Hybrid LOM Generation and Validation	115
7.1	Hybrid LOM Generation	115
7.2	Hybrid LOM Validation	118
7.3	System Deployment	120
7.4	Conclusion	121
8	Rewarding LOM Generation	123
8.1	Using LOM for supporting Lesson Design	123
8.2	Using LOM for Enhancing LO Retrieval	125
8.2.1	Querying a LO Repository from within the Lesson Graph	126
8.2.2	Evaluating Potential Results using the authored-Lesson Semantics	127
8.2.3	Experiments	129
8.2.4	Machine Learning System for combining Classifiers	135
8.2.5	Performance Analysis	136
8.2.6	Conclusion	144
8.3	System Deployment	145
8.4	Conclusion	146
9	Contributions and Perspectives	147
9.1	LOM Generation and Validation Integration	148
9.1.1	Contributions	148
9.1.2	Limitations and Future Work	148
9.2	LOM Processing	149
9.2.1	Contributions	149
9.2.2	Limitations and Future Work	150
9.3	LOM Benefits	151
9.3.1	Contributions	151
9.3.2	Limitations and Future Work	152
9.4	Conclusion	152
A	Suggestion Probabilities	155
B	Restriction Rules	159
C	Restriction Rule Definition	161
D	Experiment Data	163
E	RankBoost Results	171

List of Figures

1.1	IEEE Learning-Object Metadata specification	19
2.1	Search interface for the Merlot learning object repository	33
3.1	Distribution of data types in the IEEE LOM specification	38
3.2	Interface of Reload, a multi-format editor for LOM	45
4.1	Human-based usage of learning-object metadata	64
4.2	Automatic usage of learning-object metadata	64
4.3	Hybrid usage of learning-object metadata	64
5.1	Start of a lesson graph about “object instantiation”.	71
5.2	The <code>relation</code> category in the IEEE LOM specification	72
5.3	Start of a LO graph about “object instantiation”	75
5.4	Simple LO graph with LessonMapper2	77
5.5	Nested LO graph in LessonMapper2	79
5.6	Simultaneous edition with LessonMapper2	80
5.7	Edition “in comparison” with LessonMapper2	81
5.8	Visual Characterization of some metadata attributes of the <i>Edad en dias</i> LO.	83
5.9	Query node with title <i>constructor</i> and associated results	85
5.10	LessonMapper2 deployment model	87
6.1	Conceptual model for systems taking advantage of lesson graph semantics	90
6.2	Conceptual model using context diffusion for taking advantage of lesson graph semantics	92
6.3	Context diffusion-based framework for taking advantage of lesson graph semantics	93
6.4	Extract of the LO graph shown Figure 5.3.	98
6.5	Suggestion weights for <code>general/keyword</code> attribute.	99
6.6	Suggestion update process.	100
6.7	Extract of the LO graph shown Figure 5.3.	102
6.8	Restriction interval update process.	105
6.9	Restriction rule context-free grammar	110
7.1	Suggestions and restriction displayed into the LOM editor	117
7.2	Displaying the validation state of the metadata of a LO with LessonMapper2.	119
7.3	LessonMapper2 deployment model including rule customization	121
8.1	Start of a LO graph about “object instantiation” (from Figure 5.3)	126

8.2	Top – Recall-precision for the original classifiers based on restriction compliance. Bottom – Recall-precision for the mixed classifiers based on restriction compliance.	131
8.3	Top – Recall-precision for the original classifiers based on suggestion similarity. Bottom – Recall-precision for the mixed classifiers based on suggestion similarity.	133
8.4	Precision-recall results for Lucene, context-only diffusion, and full diffusion	134
8.5	Precision-recall results of Lucene and the RankBoost combinations.	136
8.6	Box-plots of the improvement of RankBoost (context-only diffusion version) over Lucene	137
8.7	Cumulated hypothesis generated by the context-only diffusion version of RankBoost for all the situations	139
8.8	Box-plots of the improvement of context-only diffusion and full-diffusion version of RankBoost.	142
8.9	Box-plots of the improvement of context-only diffusion and topology version of RankBoost.	143
8.10	LessonMapper2 deployment model including search module	145
A.1	Probabilities for a certain LOM attribute to have the same value in two related LOs. The nature of the relation linking the LOs is defined in horizontal axis.	156
B.1	Restriction rules for LOM attribute values based on the values of related LOs. These rules depend on the relation type relating the LOs.	160
C.1	Restriction rule context-free grammar	162
C.2	XML configuration of some restriction rule examples	162
D.1	Help sheet for interviewed people.	164
D.2	First LO graph that the interviewed teachers had to complete.	165
D.3	Second LO graph (containing the first one) that the interviewed teachers had to complete.	166
D.4	Third LO graph (containing the second one) that the interviewed teachers had to complete.	167
D.5	Fourth LO graph (containing the third one) that the interviewed teachers had to complete.	168
D.6	Interview sheet for each LO graph.	169
E.1	Hypothesis of the context-only diffusion version of RankBoost for situations 5, 9, and 13.	172
E.2	Hypothesis of the context-only diffusion version of RankBoost for situations 1, 9, and 13.	173
E.3	Hypothesis of the context-only diffusion version of RankBoost for situations 1, 5, and 13.	174
E.4	Hypothesis of the context-only diffusion version of RankBoost for situations 1, 5, and 9.	175
E.5	Hypothesis of the full-diffusion version of RankBoost for all situations	176
E.6	Hypothesis of the topology diffusion version of RankBoost for all situations	177

List of Tables

2.1	Examples of hierarchy models for organizing LOs	28
3.1	LOM consistency recommendations	52
5.1	Proposal of relation types.	74
6.1	Examples of restriction rules.	103
6.2	Restriction update process for single-element attributes.	106
6.3	Restriction update process for element set attributes.	106
8.1	T-tests on precision differences between RankBoost and Lucene	137
