Resumen.....	ii
Abstract.....	iii
Dedicatoria.....	iv
Agradecimientos.....	v
1. Introduction.....	1
1.1. Three problems.....	7
1.1.1. Operatively designed pit.....	7
1.1.2. Operative geological modeling.....	8
1.1.3. Geological uncertainty.....	8
1.2. Seminal idea: topological representations as an efficient strategy for integration and operativeness of mine planning, design and geological modeling.....	9
1.2.1. Reloading floating cones as an interesting strategy.....	9
1.2.2. Parametric cones.....	11
1.3. Problem setting.....	12
1.4. Key idea of the thesis.....	13
1.5. Objectives and scope.....	14
General objective.....	14
Specific objectives.....	14
Scope.....	14
1.6. Hypotheses.....	15
2. Literature review.....	16
2.1. Algorithms for planning open pit mines.....	16
2.1.1. Handicraft tools.....	16
2.1.2. Floating cones.....	17
2.1.3. Simulated annealing.....	19
2.1.4. Lerchs and Grossman algorithm and modern developments.....	20
2.2. Geostatistics and stochastic geometry.....	22
2.2.1. Kriging.....	22

2.2.2.	Multivariable data	23
2.2.3.	Simulation and co-simulation	23
2.2.4.	Stochastic geometry: objects and fracture processes	24
2.3.	Stochastic optimization	26
2.4.	Mine design	30
2.4.1.	About open pit design.	31
2.4.2.	Ramps, benches and slope criteria	32
2.4.3.	Topological optimization	34
2.5.	Metallurgy	34
2.5.1.	Concentration	35
2.5.2.	Pyrometallurgy	36
2.5.3.	Hydrometallurgy	37
2.6.	Environment	38
2.6.1.	Acid water drainage	38
3.	Problem 1: Operative open pit design	41
3.1.	Reality	44
3.2.	Model	46
3.3.	Cones as parametric objects.	46
3.4.	Parameterizing an open pit design	47
3.4.1.	Benches	47
3.4.2.	Ramps	48
3.4.3.	Switch-backs	48
3.5.	Optimizing with several pseudo cones	52
3.5.1.	Floating cones with simulated annealing	55
3.5.2.	Automatic design from an output of Lerchs & Grossman algorithm	55
3.5.3.	Sampling Average Approximation scheme	56
3.6.	Conclusions from automatic open pit design	57
4.	Problem 2: Geological modeling	58
4.1.	Introduction: modeling alteration domains	58
4.2.	Concepts	59
4.2.1.	Geological modeling	59

4.2.2.	Geomechanical stability.....	61
4.2.3.	Metallurgy and processing.....	61
4.3.	Proposal.....	61
4.3.1.	Problem description	61
4.3.2.	Parameterization of alteration, lithology and mineralogy domains	63
4.3.3.	Parameterization of structures.....	66
4.3.4.	Topological fitting	67
4.3.5.	Fitting with Simulated Annealing.....	69
4.3.6.	Algorithm.....	70
4.4.	Implementation and possible impact.....	73
4.4.1.	Synthetic drill hole data	73
4.4.2.	Problem.....	74
4.4.3.	Results of the proposed topological method.....	75
4.4.4.	Possible impact	76
4.5.	An alternative algorithm.....	77
5.	Discussion and Conclusions	79
5.1.	Discussion	79
5.2.	Conclusions	80
5.3.	Future Research.....	82
6.	Bibliography	83
