

# Contents

1.	Introduction.....	2
1.1	Economy overview.....	2
1.2	Energy context .....	4
1.3	Energy policy overview .....	5
1.4	Exergy Analysis of a Society.....	6
1.5	Objectives of the analysis .....	6
1.6	Scopes.....	7
2.	Exergy Analysis.....	9
2.1	Definitions .....	10
2.1.1	Environment and interactions .....	10
2.1.2	Equilibrium .....	11
2.1.3	Chemical exergy.....	12
2.1.4	Energy carriers .....	14
2.1.5	Exergy balance and exergy efficiency.....	15
3.	Preparing the exergy analysis of the Chilean Society.....	16
3.1	Problem definition.....	17
3.1.1	System boundaries.....	17
3.2.2	Society .....	19
3.2.3	Mining .....	20
3.2.4	Manufacturing .....	24
3.2.5	Transportation .....	29
3.2.6	Residential, Public, and Private (RPP).....	32
4.	Discussions.....	36
4.1	Summary of results .....	37
4.2	Discussions.....	39
4.2.1	Mining .....	40
4.2.2	Manufacturing .....	41
4.2.3	Transportation .....	44

4.2.4 Residential, Public, and Private.....	45
5. Future guidelines.....	48
6. Conclusions.....	49
7. Bibliography.....	51
8. Appendixes .....	53
Appendix A: Standard Chemical Exergy.....	53
Appendix B: Standard Chemical Exergy of Mining Products .....	53
Appendix C: Computing exergy embodied in mining products .....	54
Appendix D: Chemical Exergy of Fossil Fuels .....	54
Appendix E: Exergy Carriers consumed by the Manufacturing Sector .....	56
Appendix F: Standard Chemical Exergy of Food products .....	56
Appendix G: Computing exergy embodied in food products.....	60
Appendix H: Standard Chemical Exergy of Wood products .....	60
Appendix I: Computing exergy embodied in wood products.....	62
Appendix J: Computing exergy efficiency of the RPP sector .....	62

## Tables index

Table 1: Standard chemical exergy of selected substances. ....	13
Table 2: Exergy factors proposed by Kotas .....	14
Table 3: Energy resources produced in 2013.....	22
Table 4: Exergy output of metallic, industrial minerals, and rocks mining in 2013 .....	22
Table 5: Exergy output of energy resources in 2013 .....	22
Table 6: Exergy input estimation for extractive activities based on GDP figures.....	25
Table 7: Standard chemical exergy of selected fruits, vegetables, cereals, fish, and meat products in 2013.....	26
Table 8: Standard chemical exergy of wood and wood derived products. ....	26
Table 9: Part-load energy efficiencies considered in the analysis of the transportation sector in Chile in 2013 .....	31
Table 10: Exergy efficiency of the Chilean society in 2013 .....	37
Table 11: Sensitivity analysis of the part-load energy efficiencies used in the analysis of the transportation sector. ....	44
Table 12: Technological shift simulation in the ground transportation system.....	45
Table 13: Sensitivity analysis of the energetic efficiency of the most commonly used household appliances in the society. ....	46
Table 14: Standard chemical exergy of substances used in the analysis. ....	53
Table 15: Energy-exergy conversion factors used in the analysis of the Chilean society.....	55
Table 16: Standard chemical exergy of selected substances .....	53
Table 17: Exergy input estimation using GDP figures.....	56
Table 18: Standard chemical exergy of fruits, vegetables, cereals, meat, and fish products .....	56
Table 19: Standard chemical exergy of wood and wood derived products .....	60

## Figures Index

Figure 1: Boundaries of the exergy analysis of the Chilean society.....	17
Figure 2: Exergy flows considered in the analysis.....	18
Figure 3: Use of exergy carriers by mining subsectors in 2013.....	20
Figure 4: Metallic mining production in 2013.....	21
Figure 5: Industrial minerals and rocks production in 2013.....	21
Figure 6: Exergy value of mining sector's main products in 2013. ....	23
Figure 7: Exergy balance of the mining sector in 2013. ....	23
Figure 8: Manufacturing sector GDP by type of activity .....	24
Figure 9: Most commonly used energy sources in the manufacturing sector in 2014 .....	25
Figure 10: Exergy input to the society in the form of agricultural, livestock, fishing, and forestry products in 2013.....	27
Figure 11: Exergy output of forestry, agriculture, aquaculture, and livestock products in 2013.....	27
Figure 12: Inputs and outputs of forestry and agricultural activities in 2013.....	28
Figure 13: Inputs and outputs of livestock and aquaculture activities in 2013 .....	28
Figure 14: Exergy efficiency obtained for activities within manufacturing/extractive sector. ....	29
Figure 15: Energy sources used by the transportation sector in 2013.....	29
Figure 16: Exergy consumption in the transportation sector in 2013.....	30
Figure 17: Exergy efficiency in the transportation sector in 2013.....	32
Figure 18: Energy consumption in the RPP sector in 2013 .....	32
Figure 19: Main exergy carriers used in the RPP sector in 2013 .....	33
Figure 20: Households exergy consumption by purpose in 2002.....	34
Figure 21: Exergy efficiency of household appliances according to Ertesvåg.....	34
Figure 22: Apparent exergy output of the Residential, Public, and Private sector in 2002 ..	35

Figure 23: Exergy balance in the Residential, Public, and Private sector in 2014.....	35
Figure 24: Exergy efficiency of the main economic sectors of the Chilean society in 2013..	38
Figure 25: Exergy input and output of the society compared to flows in transportation, RPP, mining, and manufacturing.....	38
Figure 26: Exergy efficiency of the Chilean society compared to other societies .....	40
Figure 27: Exergy efficiency comparison of the mining sector among different societies....	41
Figure 28: Exergy efficiency comparison of the forestry sector among different societies..	42
Figure 29: Exergy efficiency comparison of the food sector among different societies .....	43
Figure 30: Exergy efficiency comparison of the industry sector among different societies .	43
Figure 31: Exergy efficiency comparison of the transportation sector among different societies .....	44
Figure 32: Exergy efficiency comparison of the RPP sector among different societies.....	46
Figure 33: Per capita exergy use of household sector in Chile (2013) and Norway (1995) ..	46
