Introduction	1
0.1 Many colours	1
0.2 Bipartite graphs	4
0.3 Local colourings	5
0.4 Non-complete graphs	5
0.5 Other results	6
0.6 Edge-colouring of sparse graphs	6
0.7 Parameter estimation	6
1	7
1.1 Introduction	7
1.2 Covering with connected matchings	9
1.2.1 Preliminaries	9
1.2.2 Proof of Lemma 1.1.2	12
1.3 Covering almost all vertices with connected matchings	21
1.3.1 Preliminaries	21
1.3.2 Proof of Lemma 1.3.1	24
1.4 From connected matchings to cycles	33
1.5 Covering all vertices	34
1.5.1 Preliminaries	34
1.5.2 Proof of Theorem 1.1.1(b)	35
1.5.3 A remark on 3-coloured complete graphs	36
2	37
2.1 Introduction	37
2.2 Proof of Theorem 2.1.3	40
2.2.1 Monochromatic matchings	40
2.2.2 From matchings to cycles	41
2.2.3 The absorbing method	44
2.3 Bipartite graphs with 2-local colourings	45
2.3.1 Partitioning into paths	46
2.3.2 Finding long paths	49
3 Partitioning a red and blue edge coloured graph of minimum degree $2n/3 + o(n)$ into three monochromatic cycles	52
3.1 Introduction	52
3.2 Preliminaries	55

3.2.1	Notation	55
3.2.2	Regularity	56
3.3	Proof of Theorem 3.1.1	57
3.4	Proof of Lemma 3.3.2	66
3.4.1	(Case: One of C_1 and C_2 is spanning)	67
3.4.2	(Case: C_1 and C_2 have distinct colours)	73
3.4.3	(Case: C_1 and C_2 the same colour)	73
3.5	Distribute exceptional vertices	77
3.6	Extremal colourings	79
4	Chromatic index, treewidth and maximum degree	83
4.1	Introduction	83
4.2	Definitions	84
4.3	A bound on the number of edges	85
4.4	A lower bound on the maximum degree	88
4.5	Discussion	89
4.6	Degenerate graphs	93
5	Estimating parameters associated with monotone properties	94
5.1	Introduction and main results	94
5.2	Notation and tools	97
5.3	Recoverable parameters	99
5.3.1	Estimation over cluster graphs	99
5.3.2	Recovering partitions	99
5.3.3	Monotone graph properties are recoverable	101
5.4	Estimation of $ Forb(\Gamma, \mathcal{F}) $	104
5.5	Proof of Theorem 5.3.2	107
5.6	Concluding remarks	110
6	Bibliography	111
