Contents

1 Introduction **1**
- 1.1 Thesis description . . . 2
- 1.2 Motivation . . . 3
- 1.3 Objectives . . . 4
  - 1.3.1 Main objective . . . 4
  - 1.3.2 Specific objectives . . . 4
- 1.4 Methodology . . . 5
- 1.5 Thesis content . . . 6

2 Background **7**
- 2.1 Geometry . . . 7
  - 2.1.1 Basic concepts . . . 7
  - 2.1.2 Delaunay and Voronoi diagrams . . . 8
  - 2.1.3 Data structures . . . 10
    - 2.1.3.1 Assumptions . . . 10
    - 2.1.3.2 Vertex-Vertex . . . 10
    - 2.1.3.3 Face-Vertex . . . 11
    - 2.1.3.4 Winged-Edge . . . 11
  - 2.1.4 Key algorithms . . . 12
    - 2.1.4.1 Segment intersection . . . 12
    - 2.1.4.2 Point on segment . . . 13
    - 2.1.4.3 Polygon area . . . 13
    - 2.1.4.4 Polygon centroid . . . 14
    - 2.1.4.5 Polygon diameter . . . 15
    - 2.1.4.6 Point in polygon . . . 17
- 2.2 Numerical solution of linear elasticity . . . 18
  - 2.2.1 Basic concepts . . . 18
  - 2.2.2 Linear elasticity . . . 18
  - 2.2.3 Numeral integration . . . 21
  - 2.2.4 Numerical methods for elasticity . . . 22
    - 2.2.4.1 Finite Element Method . . . 22
    - 2.2.4.2 Virtual Element Method . . . 28
  - 2.2.5 Error estimates . . . 32
    - 2.2.5.1 Comparing nodal values . . . 32
    - 2.2.5.2 Energy norms . . . 32

3 State of the art **34**
3.1 Polygonal finite element methods . . . 34
3.1.1 Virtual Element Method . . . 36
3.1.2 Mesh generation for PFEM . . . 37
3.2 Adaptive meshes . . . 39
3.3 Generation of the Voronoi diagram . . . 40
3.3.1 ShaPo - A framework for generating 2D Voronoi Meshes . . . 41
3.3.2 Computing the clipped Voronoi diagram . . . 41

4 Design **43**
4.1 Requirements . . . 43
4.2 Analysis of possible solutions . . . 44
4.2.1 Problem definition . . . 44
4.2.2 Mesh generation . . . 44
4.2.3 Linear elasticity . . . 45
4.2.4 Modifiable meshes operations . . . 46
4.3 Proposed software architecture . . . 47
4.3.1 General architecture . . . 47
4.3.2 General implementation choices . . . 48
4.3.2.1 Programming language . . . 48
4.3.2.2 External tools . . . 49
4.3.3 Libraries design . . . 50
4.3.4 Process design . . . 52
4.3.5 Model design . . . 55
4.3.5.1 Voronoi generation library . . . 55
4.3.5.2 Virtual Element Method library . . . 59
4.3.5.3 Modifiable meshes library . . . 65
4.4 Experimental design . . . 68
4.4.1 Efficiency experiments . . . 69
4.4.2 Numerical accuracy experiments . . . 69
4.4.2.1 Convergence of the solutions . . . 70
4.4.2.2 Modifiable meshes quality experiments . . . 70

5 Implementation **72**
5.1 Voronoi generation library . . . 72
5.1.1 Voronoi diagram generation . . . 72
5.1.1.1 Domain/Hole processing . . . 73
5.1.1.2 Generation of seed points . . . 73
5.1.1.3 Write input data to Triangle . . . 75
5.1.1.4 Processing of Triangle's output . . . 76
5.1.1.5 Summary of relevant data . . . 77
5.1.1.6 Voronoi diagram from Delaunay triangulation . . . 79
5.1.2 Geometric algorithms . . . 83
5.1.2.1 Self intersecting polygon test . . . 84
5.1.2.2 Orientation test and fix . . . 85
5.1.2.3 Ear clipping triangulation . . . 85
5.1.3 Utilities . . . 87

5.1.4 Configurations . . . 87
5.2 Virtual Element Method Library . . . 88
5.2.1 Initialization of the system . . . 88
5.2.2 Computation of the displacements . . . 91
5.2.2.1 Calculation of the elemental stiffness matrix . . . 91
5.2.2.2 Calculation of the elemental load vector . . . 92
5.2.2.3 Assembly . . . 95
5.2.2.4 Boundary conditions . . . 96
5.2.2.5 Linear system solving . . . 97
5.2.3 Implementing the Finite Element Method . . . 97
5.2.3.1 Initialization of the system . . . 97
5.2.3.2 Numerical integration . . . 98
5.2.3.3 Computation of the displacements . . . 99
5.2.4 Post processing . . . 101
5.2.5 Configurations . . . 104
5.3 Modifiable meshes library . . . 105
5.3.1 Modifiable algorithms . . . 105
5.3.1.1 Eliminating non-convex mesh elements . . . 105
5.3.1.2 Refining a mesh element . . . 106
5.3.1.3 Deleting a mesh element . . . 107
5.3.1.4 Breaking the mesh . . . 108
5.3.2 Utility algorithms . . . 112
5.3.2.1 Search for container polygon . . . 113
5.3.2.2 Polygon merging . . . 115
5.3.2.3 Including new elements on the mesh . . . 120
5.3.3 Configurations . . . 122
5.4 Utilities module . . . 124
5.4.1 Unique list . . . 124
5.4.2 Pair and Trio . . . 126
5.4.3 Miscellaneous functions . . . 126

6 Results **128**
6.1 Theoretical results . . . 128
6.1.1 Utilities . . . 129
6.1.2 Complexities summary . . . 129
6.1.2.1 Basic functions . . . 129
6.1.2.2 Custom methods . . . 130
6.1.3 Main algorithms analysis . . . 130
6.1.3.1 Voronoi diagram generation . . . 130
6.1.3.2 Linear elasticity solving . . . 133
6.2 Experimental results . . . 137
6.2.1 Voronoi generation . . . 137
6.2.2 Virtual Element Method . . . 138
6.3 Numerical results . . . 140
6.3.1 Convergence tests . . . 140
6.3.1.1 Patch test . . . 140
6.3.1.2 Equilibrium patch test . . . 142

6.3.1.3 Parabolic beam test . . . 142
6.3.2 Modifiable meshes tests . . . 145
6.3.2.1 Original results . . . 146
6.3.2.2 Convexity tests . . . 148
6.3.2.3 Refining the mesh . . . 149
6.3.2.4 Breaking the mesh . . . 151

7 Geometric examples **156**
7.1 Mesh generation . . . 156
7.1.1 Defining domains . . . 157
7.1.2 Generating with different rules . . . 158
7.1.3 Generation in complex domains . . . 159
7.2 Modifiable meshes operations . . . 162
7.2.1 Fixing convexity . . . 162
7.2.2 Deleting elements . . . 162
7.2.3 Refining elements . . . 163
7.2.4 Breaking the mesh . . . 165

8 Conclusions **166**

Bibliography **169**
