|          |                                                                    |           |
|----------|--------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction</b>                                                | <b>1</b>  |
| 1.1      | Hypotheses . . . . .                                               | 2         |
| 1.2      | Objectives . . . . .                                               | 2         |
| 1.2.1    | Main objective: . . . . .                                          | 2         |
| 1.2.2    | Specific objectives . . . . .                                      | 2         |
| 1.3      | Structure . . . . .                                                | 2         |
| <b>2</b> | <b>Theoretical framework</b>                                       | <b>4</b>  |
| 2.1      | Binary star dynamics . . . . .                                     | 4         |
| 2.1.1    | Observational aspects . . . . .                                    | 5         |
| 2.1.2    | Spectroscopic data . . . . .                                       | 6         |
| 2.2      | Sampling techniques . . . . .                                      | 9         |
| 2.2.1    | Bayesian Inference . . . . .                                       | 9         |
| 2.2.2    | Markov Chain Monte Carlo: an introduction . . . . .                | 9         |
| 2.2.3    | MCMC theory . . . . .                                              | 10        |
| 2.2.3.1  | The Monte Carlo principle . . . . .                                | 10        |
| 2.2.3.2  | Preceding ideas: rejection sampling, importance sampling . . . . . | 11        |
| 2.2.3.3  | A discrete analogy of MCMC . . . . .                               | 12        |
| 2.2.3.4  | Metropolis/Metropolis-Hastings algorithm . . . . .                 | 13        |
| 2.2.3.5  | Kernel composition and Gibbs sampler . . . . .                     | 15        |
| 2.3      | Multiple imputation theory . . . . .                               | 17        |
| 2.3.1    | MCMC for multiple imputation . . . . .                             | 18        |
| <b>3</b> | <b>State of the art</b>                                            | <b>20</b> |
| 3.1      | Classic orbit fitting techniques . . . . .                         | 20        |
| 3.2      | Orbital fitting as an optimization problem . . . . .               | 20        |
| 3.3      | Bayesian estimation of orbital parameters . . . . .                | 22        |
| 3.3.1    | Bayesian analysis of exoplanet parameters . . . . .                | 22        |
| 3.3.2    | Bayesian approach applied to astrometric data . . . . .            | 25        |
| <b>4</b> | <b>MCMC for orbit calculation</b>                                  | <b>27</b> |
| 4.1      | Motivation . . . . .                                               | 27        |
| 4.2      | Model description . . . . .                                        | 27        |
| 4.2.1    | On the dimensionality of $\vec{\theta}$ . . . . .                  | 28        |
| 4.3      | Sample selection . . . . .                                         | 30        |
| 4.4      | Visual Binaries . . . . .                                          | 30        |
| 4.4.1    | Method description . . . . .                                       | 30        |
| 4.4.2    | Results . . . . .                                                  | 32        |
| 4.4.3    | Analysis and conclusions . . . . .                                 | 34        |
| 4.5      | Spectroscopic binaries . . . . .                                   | 39        |
| 4.5.1    | Results and discussion . . . . .                                   | 40        |

|          |                                                                                                           |           |
|----------|-----------------------------------------------------------------------------------------------------------|-----------|
| <b>5</b> | <b>Orbit calculation with incomplete data</b>                                                             | <b>44</b> |
| 5.1      | Methodology . . . . .                                                                                     | 44        |
| 5.2      | Simulation-based tests . . . . .                                                                          | 47        |
| 5.2.1    | Results and analysis . . . . .                                                                            | 49        |
| 5.3      | A case study: binary star HU177 . . . . .                                                                 | 51        |
| 5.3.1    | Results and analysis . . . . .                                                                            | 51        |
| <b>6</b> | <b>Final remarks</b>                                                                                      | <b>55</b> |
|          | <b>Bibliography</b>                                                                                       | <b>57</b> |
| <b>A</b> | <b>Derivation of radial velocity equation</b>                                                             | <b>62</b> |
| <b>B</b> | <b>On Thiele-Innes and Campbell elements</b>                                                              | <b>64</b> |
| B.1      | Least-squares estimate . . . . .                                                                          | 64        |
| B.2      | Conversion from Thiele-Innes to Campbell . . . . .                                                        | 65        |
| <b>C</b> | <b>Dependency between <math>(\sigma_\rho, \sigma_\theta)</math> and <math>(\sigma_x, \sigma_y)</math></b> | <b>66</b> |
| <b>D</b> | <b>Auxiliary tables</b>                                                                                   | <b>69</b> |

# List of Figures

|     |                                                                                           |    |
|-----|-------------------------------------------------------------------------------------------|----|
| 2.1 | Diagram with mean and eccentric anomaly . . . . .                                         | 5  |
| 2.2 | Radial velocity variations . . . . .                                                      | 7  |
| 2.3 | Diagram for determination of $z$ . . . . .                                                | 7  |
| 4.1 | Comparison with published orbits: <b>HU177</b> and <b>B1352</b> . . . . .                 | 35 |
| 4.2 | Best orbit and PDFs of selected objects. . . . .                                          | 38 |
| 4.3 | Orbit estimates of <b>CHR111</b> and <b>YSC132AaAb</b> . . . . .                          | 42 |
| 4.4 | Posterior distributions of spectroscopic binaries. . . . .                                | 43 |
| 5.1 | Orbit estimate in presence of incomplete information (synthetic data) . . . . .           | 50 |
| 5.2 | Panels with the posterior PDFs (synthetic data). . . . .                                  | 50 |
| 5.3 | Comparison: visualization of orbit estimates for <b>HU177</b> and <b>HU177*</b> . . . . . | 52 |
| 5.4 | PDFs of orbital parameters ( <b>HU177</b> ) . . . . .                                     | 53 |
| C.1 | Points selected for testing. . . . .                                                      | 67 |
| C.2 | Dependency between $\rho$ and $\sigma_\theta$ . . . . .                                   | 67 |

# List of Tables

|     |                                                                                                     |    |
|-----|-----------------------------------------------------------------------------------------------------|----|
| 4.1 | Estimated parameters (visual binaries) . . . . .                                                    | 35 |
| 4.2 | Masses and parallaxes (visual binaries) . . . . .                                                   | 36 |
| 4.3 | Algorithm-related parameters for spectroscopic binaries . . . . .                                   | 40 |
| 4.4 | Estimated parameters (spectroscopic binaries). . . . .                                              | 41 |
| 4.5 | Trigonometric and dynamic parallaxes (spectroscopic binaries) . . . . .                             | 41 |
| 5.1 | Ephemerides of a visual binary (synthetic data) . . . . .                                           | 48 |
| 5.2 | Maximum likelihood orbit estimates in presence of incomplete information ( <b>HU177</b> ) . . . . . | 52 |
| 5.3 | Estimation of orbital parameters in presence of incomplete information ( <b>HU177</b> ) . . . . .   | 54 |
| C.1 | Covariance matrices for different values of $\rho, \sigma_\theta$ . . . . .                         | 68 |
| D.1 | Additional information (visual binaries) . . . . .                                                  | 69 |
| D.2 | Compiled photometry . . . . .                                                                       | 70 |
