

Contents

Introduction	1
1 Literature review	3
1.1 Flotation	3
1.1.1 Collectors	5
1.1.2 Frothers	8
1.1.3 Activators	10
1.1.4 Depressants	11
1.2 Water resources in Chile	12
1.2.1 Water consumption in the copper mining in Chile	15
1.3 Problems associated to seawater flotation	18
1.3.1 Excessive lime consumption	18
1.3.2 Drop in molybdenite recovery	18
1.3.2.1 Precipitation of colloidal secondary ions	20
1.3.2.2 Reaction of molybdenite with calcium and magnesium ions .	20
1.3.2.3 Heterocoagulation of molybdenite and quartz	21
1.4 Microorganisms that oxidize iron and sulfur compounds	23
1.4.1 Bio-oxidation of the minerals	25
1.4.1.1 Direct oxidation mechanism	26
1.4.1.2 Indirect oxidation mechanism	26
1.4.2 Acidophilic properties	29
1.4.3 Microbial adhesion to the minerals	31
1.4.3.1 Role of exopolysaccharides in attachment	32
1.4.3.2 Attachment mechanisms	34
1.4.3.3 Attachment selectivity	39
1.4.3.4 Modification of surface properties	39
1.5 Bioflotation studies	41
1.5.1 Bioflotation with <i>Acidithiobacillus ferrooxidans</i> in fresh water	41
1.5.2 Bioflotation with <i>Leptospirillum ferrooxidans</i> in fresh water	51

1.5.3	Bioflotation with <i>Acidithiobacillus thiooxidans</i> in fresh water	54
2	Materials and Methods	57
2.1	Minerals	57
2.2	Flotation liquors	59
2.3	Microorganisms	59
2.4	Bioflotation	61
2.5	Attachment kinetics and isotherms	62
2.6	Determination of EPS released in water	63
2.7	Flotation with released EPS	64
2.8	Streaming potential	65
2.9	Contact angle	66
3	Results and discussion	68
3.1	Bioflotation	68
3.2	Attachment kinetics and isotherms	73
3.3	Flotation with released EPS	81
3.4	Streaming potential	82
3.5	Contact angle	85
	Conclusions	88
	Bibliography	91
	Appendix A: Granulometric analysis	98
	Appendix B: X-ray diffractogram	102
	Appendix C: Mineralogical analysis	103
	Appendix D: Calibration curve for glucose	104
	Appendix E: SEM images	105
	Appendix F: Article “Biodepression of pyrite using <i>Acidithiobacillus ferrooxidans</i> in seawater”	111
	Appendix G: Proceeding “Biodepression of pyrite in seawater flotation”	117
