

Sterols from the marine sponge *Lophon proximum*

Seldes, A. M.

Palermo, J. A.

Gros, E. G.

Rovirosa, J.

San-Martin, A.

Ten Δ^5 -sterols, making up 77% of the total fraction, and seven 5β -stanol derivatives were identified from the sponge *Lophon proximum*. The pattern is similar to that found in related sponges. © 1988.
