

Fungal infections in 2 cases of fulminant hepatitis Infección por hongos en dos casos de hepatitis fulminante.

Braham,

Smok,

Infectious complications are highly prevalent in patients with fulminating hepatitis. We report 2 female patients, aged 42 and 80 years old, with fulminating hepatitis caused by virus B and virus non-A non B, who died 20 and 25 days after initiation of the disease. Post mortem examinations showed severe *C albicans* infection of the gastrointestinal tract. A literature review is included.
