

Tungiasis. A clinical case Tungiasis. Caso clinico.

Spronghle,

Apt,

Eguiguren,

Pérez,

Zulantay,

A 22 year old Chilean male presented with necrotic lesions of the 5 toes of the right foot and the heel of the left foot. He had spent 7 months traveling in the Amazona region of Brazil. Surgery was performed to clean the areas where eggs of *Tunga penetrans* were identified.
