

## Acute fasciolosis: A clinical case Fasciolosis aguda: Caso clínico

Apt, Werner

Lopez, Ximena

Zulanta, Inés

Benavente, Ricardo

Woman of 39 years of age from Talca province (VII Region) who presented intense abdominal pain which was interpreted as an acute abdomen, and an exploratory laparotomy was performed, which was not conclusive. After different procedures and tests the diagnosis of acute fasciolosis was achieved. She was treated with triclabendazole.
