

Complications of laparoscopic urological procedures Complicaciones en cirugía laparoscópica urológica

Castillo, Octavio

Cortés, O.

Laparoscopic urology has evolved considerably during last decade as well as number and spectrum of surgical related complications. Experiences reported by laparoscopic trained groups allow preventing, promptly recognizing, and safe and efficient management of the laparoscopic related complications. We present our complications in all patients undergoing urological laparoscopic procedures from November 1992 to June 2005. A literature search was conducted to evaluate complications of every laparoscopic procedure.
