

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Isogeometric Analysis and refinable splines . . . . .	1
1.2	Geometry Independent Field approxiXimation: decoupling of the field and geometry . . . . .	2
1.3	Error estimators and Adaptive refinement . . . . .	3
1.4	Selected applications . . . . .	4
1.4.1	Time-harmonic acoustics . . . . .	4
1.4.2	Kirchhoff–Love thin plates and fracture mechanics . . . . .	6
1.5	Introduction to the present work . . . . .	7
1.6	Objectives and Statement . . . . .	8
1.6.1	General Objective . . . . .	8
1.6.2	Specific Objectives . . . . .	8
1.6.3	Statement and Thesis Scope . . . . .	8
<b>2</b>	<b>Methodology</b>	<b>9</b>
2.1	Literature review . . . . .	9
2.2	PHT-Splines GIFT code . . . . .	9
2.3	Adaptive refinement strategies . . . . .	9
2.4	Applications on wave propagation problems . . . . .	10
2.5	Applications on fracture mechanics on thin plates . . . . .	10
<b>3</b>	<b>Theoretical background</b>	<b>11</b>
3.1	Isogeometric Analysis . . . . .	11
3.1.1	Non Uniform Rational B-Spline (NURBS) . . . . .	11
3.2	Polynomials Splines Over Hierarchical T-meshes . . . . .	17
3.2.1	T-meshes . . . . .	17
3.2.2	Hierarchical T-meshes . . . . .	17
3.2.3	PHT-Splines Space . . . . .	18
3.2.4	PHT-Splines Surfaces . . . . .	18
3.3	Geometry Independent Field approximaTion (GIFT) . . . . .	19
3.3.1	Formulation of GIFT . . . . .	21
3.4	Error estimators and Adaptive refinement . . . . .	21
3.4.1	Residual-based error estimator . . . . .	22
3.4.2	Recovery-based error estimator . . . . .	23
3.4.3	Marking strategies . . . . .	24
3.5	Helmholtz equation . . . . .	25

3.5.1	Boundary-value problem (BVP) . . . . .	25
3.5.2	Weak Form . . . . .	26
3.5.3	A posteriori error-estimates for the Helmholtz equation . . . . .	27
3.6	Kirchhoff-Love plate theory and fracture mechanics . . . . .	28
3.6.1	Strong Form . . . . .	29
3.6.2	Weak Form . . . . .	30
3.6.3	Vibration of plates . . . . .	31
3.6.4	XGIFT: Extended formulation for GIFT . . . . .	32
3.6.5	Computation of Stress Intensity Factors (SIF) . . . . .	36
3.6.6	J-Integral and Interaction Integral . . . . .	38
3.6.7	A posteriori error-estimates for the Kirchhoff-Love equation . . . . .	40
3.6.8	Dynamic analysis and adaptive refinement . . . . .	42
<b>4</b>	<b>Numerical results: Helmholtz equation</b>	<b>43</b>
4.1	2D Numerical Examples . . . . .	43
4.1.1	The L-shape domain . . . . .	43
4.1.2	The thin plate example . . . . .	51
4.1.3	The star-shaped geometry . . . . .	56
4.2	3D Numerical Examples . . . . .	59
4.2.1	The unit cube problem . . . . .	59
<b>5</b>	<b>Numerical Results: Fracture Mechanics of Kirchhoff-Love plates</b>	<b>67</b>
5.1	Numerical Examples: Bending of plates with cracks . . . . .	67
5.1.1	Square plate with an edge crack . . . . .	67
5.1.2	Square plate with a central crack . . . . .	73
5.1.3	Square plate with a central crack subjected to constant pressure loading	76
5.2	Vibration of plates with cracks . . . . .	79
5.2.1	Square plate with central crack . . . . .	79
5.2.2	Clamped circular plate with a central crack . . . . .	81
5.2.3	Clamped annular plate with 2 symmetric cracks . . . . .	84
<b>6</b>	<b>Conclusion</b>	<b>86</b>
	<b>Bibliography</b>	<b>88</b>
	<b>Appendix</b>	<b>100</b>
	<b>Appendix A Geometry Parameterization employed in the Numerical Exam- ples</b>	<b>100</b>
