<b>Introduction</b>	<b>1</b>
<b>1 Introduction</b>	<b>1</b>
1.1 What is mine planning? . . . . .	1
1.2 Previous works . . . . .	3
1.3 Objectives of the thesis . . . . .	6
1.4 Contributions and structure of the thesis . . . . .	6
<b>2 Mathematical Background</b>	<b>8</b>
2.1 Stochastic optimization . . . . .	8
2.2 Lagrangian Relaxation and Volume Algorithm . . . . .	13
2.3 Robust optimization: Worst Case & Dynamic Worst Case Approach . . . . .	20
2.4 Geometric Brownian Motion . . . . .	23
2.5 Option pricing . . . . .	27
2.6 Block caving & micro-seismicity . . . . .	31
2.7 Modelling an Underground Mine . . . . .	34
<b>3 Stochastic model with price and seismicity uncertainty</b>	<b>38</b>
3.1 Modelling the uncertainty . . . . .	38
3.1.1 Seismic risk scenarios . . . . .	38
3.1.2 Study case at El Teniente mine . . . . .	41
3.1.3 Case without hydraulic fracturing . . . . .	41
3.1.4 Case with hydraulic fracturing . . . . .	43
3.1.5 Prices scenarios . . . . .	45
3.2 Stochastic model with price and seismicity uncertainty . . . . .	46
3.3 Solution method based on Lagrangian Relaxation . . . . .	51

3.3.1	Lagrangian Relaxation (LR) . . . . .	51
3.3.2	The volume algorithm and obtaining feasible solutions . . . . .	53
3.3.3	Solving the subproblems . . . . .	56
3.4	Numerical results . . . . .	57
3.4.1	Sensitivity Analysis . . . . .	59
3.4.2	Model with price uncertainty vs model with price and seismic uncertainty	60
3.4.3	Comparison between models with and without HF . . . . .	60
<b>4</b>	<b>Conclusions and future work</b>	<b>62</b>
4.1	Conclusions and future work . . . . .	62
<b>Bibliography</b>		<b>64</b>
