Introduction	1
1 Searching for the Initial Conditions of our Universe	8
1.1 The dynamics and content of our Universe	10
1.2 A short history of our universe	13
1.3 The Cosmic Microwave Background	18
1.4 Large-Scale Structure	22
2 Models of Inflation and Primordial non-Gaussianity	24
2.1 Single-Field Inflation	24
2.1.1 How inflation happens	25
2.1.2 Fluctuation fields and horizon exit	28
2.1.3 From primordial perturbations to the initial conditions of our universe	29
2.2 Multi-Field Inflation	33
2.2.1 The classical inflaton trajectory	34
2.2.2 Slow-roll conditions and perturbations	35
2.2.3 Cumulative Effects	37
2.3 Detectability of Primordial non-Gaussianity	44
3 Tomographic non-Gaussianity: the n-point Function Approach	45
3.1 Correlation Functions and Deviations from Gaussianity	46
3.2 Description of the mechanism sourcing the Perturbations	47
3.2.1 Diagrammatics of the Tomography	50
3.2.2 Computation of correlation functions	53
3.2.3 Tomographic non-Gaussianity	57
3.3 Reconstructing the Landscape	60
3.3.1 PDF reconstruction: general idea	60
3.3.2 Asymptotic reconstruction	61
3.3.3 Full reconstruction	63
3.4 Aspects of the Tomography	65
3.4.1 Relation to previous works	65
3.4.2 After inflation	66
3.4.3 Bispectrum constraints on the PDF	67
3.5 The general stage for Tomographic non-Gaussianity	69
4 The Landscape of Tomographic non-Gaussianity	74
4.1 Evolving the Quantum Field	74

4.2	Links with Stochastic Inflation	79
4.3	Beyond First-Order Perturbation Theory	81
4.4	Generalizing the Tomography	84
4.4.1	1-point and multi-point PDFs to first order	86
4.4.2	A \mathbf{k} -space PDF for the amplitude of the fluctuations	87
5	Searching for Tomographic non-Gaussianity in the CMB and LSS	91
5.1	Statistics of late-time observables	91
5.1.1	Probability Distribution Functional: “bare” theory	95
5.1.2	Probability Distribution Functional: running and renormalizing	97
5.1.3	Partition Function and n -point Correlators	100
5.1.4	Fixed-point Probability Distribution Functions	102
5.2	An analysis of the Cosmic Microwave Background	106
5.2.1	Θ Statistics	106
5.2.2	1-point PDF constraints	107
5.2.3	2-point PDFs and scale dependence	112
5.3	Prospects for Large-Scale Structure Surveys	113
5.3.1	Halo Mass Function	114
5.3.2	Halo bias	117
	Conclusions	121
	Bibliography	123
	Appendices	136
A	Details on the development of Tomographic non-Gaussianity	137
A.1	Details of n -point functions’ computations	137
A.2	Structure of I_n	142
A.2.1	Derivation of ΔI_n	144
B	PDFs in time-dependent Quantum Field Theory	146
B.1	Main result	149
B.1.1	The loop contributions	149
B.1.2	A corollary of Wick’s theorem	151
B.1.3	An explicit result for the PDF of a self-interacting scalar field at every order	151
B.2	The loop structure within the n -point functions	154
B.3	The in-in PDF for an arbitrary initial state	158
C	Partition Function and 2-point PDFs in the presence of Local NG	160
C.1	Partition Function	160
C.2	The 2-point PDFs	163
C.2.1	2-point PDF: three-dimensional case	163
C.2.2	2-point PDF: map to the sphere S^2	164
