

Contents

1	Introduction	1
1.1	Research Formulation	3
1.2	Main Objective	3
1.3	Specific Objectives	4
1.4	Reader's Guide	4
2	Theoretical Framework	6
2.1	Geological Models	6
2.1.1	Porphyry Copper Models	6
2.2	Computer Based Models	13
2.2.1	Cellular Automata	15
2.2.2	Geological Applications	16
3	Proposed Model	18
3.1	Geological Model	18
3.2	Computational Conceptualization	20
3.2.1	Methodology and Structure	21
3.2.2	Governing Equations	22
4	Implementation	33
4.1	Programming Language and Design	33
4.2	Defining Objects	34
4.3	Initialization of Variables	37
4.3.1	Physical Parameters	37
4.3.2	Fixed Simulation Parameters	38
4.3.3	Rock Grid Initialization	38
4.3.4	Hydrothermal Fluid Grid	38
4.3.5	Recorded Fluid Grid	39
4.3.6	Number of Iterations	39
4.4	Interactions	39
4.4.1	Fluid Movement	40
4.4.2	Thermal Equilibrium	41
4.4.3	Fluid Density	42
4.4.4	Rock Porosity and Fluid pH	42
4.5	Visualizations	43
4.6	Running the Simulations and Results of Visualization Methods	44

5	Results and Discussions	46
5.1	Proposed Tests	46
5.1.1	Movement Tests	47
5.1.2	Thermal Exchange Tests	47
5.1.3	Density Variation Tests	47
5.1.4	pH and Porosity Variation Tests	48
5.1.5	Compound Tests	48
5.2	Results of Proposed Tests	48
5.2.1	Movement and Viscosity Results	49
5.2.2	Thermal Exchange Results	54
5.2.3	Density Variation Results	56
5.2.4	pH and Porosity Variation Results	58
5.2.5	Compound Test Results	60
5.3	Analyses	62
5.3.1	Movement and Viscosity Analysis	62
5.3.2	Thermal Exchange Analysis	63
5.3.3	Density Variation Analysis	63
5.3.4	pH and Porosity Variation Analysis	63
5.3.5	Compound Analysis	63
5.4	General Discussions	64
6	Conclusions and Proposed Research	67
	Bibliography	69
