Contents

Summary ..... **i**

Resumen ..... **ii**

Agradecimientos ..... **iii**

Contents ..... **iv**

Figures Index ..... **vi**

Tables Index ..... **viii**

1. Chapter 1: Introduction **1**

1.1 Motivation and Theoretical Framework *1*

1.2 Research Questions and Goals *3*

2. Chapter 2: Methodology **5**

2.1 Framework *5*

2.2 Optimization Model *6*

2.3 Superstructure *7*

2.4 Case Study *8*

3. Chapter 3: Resilience Metrics **10**

3.1 Literature Review on Resilience Metrics *10*

3.2 Discussion of Some Metrics Related to this Study *14*

4. Chapter 4: Operational Simulation and Resilience Measurement **19**

4.1 Structure of the Operational Simulation *19*

4.2 Results in Applied Case *20*

5. Chapter 5: A New Resilience Indicator for the System Design **23**

5.1 Maximum Power Available *23*

5.2 Energy Shortage Measurement *24*

5.3 Resilience Measurement *25*

6. Chapter 6: Planning a Resilient and Low-cost Multi-energy System **27**

6.1 Investment Planning *27*

6.2 Operational Simulation *29*

6.3 Resilience Index Validation..... 32

7. Conclusions 37

Glossary.....39

Bibliography.....40

8. Nomenclature 43

8.1 Sets..... 43

8.2 Parameters 44

8.3 Variables..... 44

Appendixes 46

A. Appendix A: HAZUS Earthquake Model 46

Fragility Curves 46

Restoration curves 47

B. Appendix B: Monte Carlo Method..... 48

C. Appendix C: Optimization Methods 48

Single-objective Optimization 48

Multi-objective Optimization.....49

Multi-objective Optimization Methods 49

D. Appendix D: Installed Capacity of each Technology: Case Study 51

E. Appendix E: Fragility Curves..... 52

Data Obtained from HAZUS Methodology 52

Calculation Report.....57

F. Appendix F: Results of Three Scenarios..... 59

Install Capacity of each Technology.....59

G. Appendix G: Model Formulation..... 62

H. Appendix H: Inputs for the Model..... 75

I. Appendix I: GAMS Model..... 75
