

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Objectives . . . . .	4
1.1.1	General Objective . . . . .	4
1.1.2	Specific Objectives . . . . .	4
1.2	Scopes . . . . .	4
<b>2</b>	<b>Background</b>	<b>5</b>
2.1	Bayesian Procedure for Model Parameter Updating . . . . .	5
2.1.1	Fundamental and model parameter updating . . . . .	5
2.1.2	Point Estimates: Maximum a Posteriori (MAP) and Maximum Likelihood Estimate (MLE) . . . . .	7
2.1.3	Transitional Markov Chain Montecarlo . . . . .	8
2.1.4	Extension for multiple-output systems . . . . .	10
2.1.5	Model Class Selection . . . . .	10
<b>3</b>	<b>Model Parameter Updating For PEHs</b>	<b>13</b>
3.1	System Model for FRFs in PEHs . . . . .	13
3.2	Prior Probability Density Function for Model Parameters . . . . .	14
3.3	Experimental Identification of the FRF . . . . .	15
3.4	Prior and Posterior Predictive Analyses . . . . .	15
<b>4</b>	<b>System Identification for a single PEH</b>	<b>17</b>
4.1	Additive or Multiplicative Prediction Error? . . . . .	19
4.2	Point Estimates and Stochastic Simulation . . . . .	21
4.3	Model Class Selection . . . . .	26
4.4	Effect of the Number of Frequencies and Frequency Bandwidth in the FRF . . . . .	29
<b>5</b>	<b>Manufacturing Properties Identification for a Group of PEHs</b>	<b>33</b>
5.1	Updating Parameters using a Single Output . . . . .	33
5.2	Updating Parameters using Multiples Output . . . . .	36
5.3	Dispersion of the Parameters and Confidence Interval . . . . .	38
<b>6</b>	<b>Conclusions</b>	<b>43</b>
	<b>Bibliografía</b>	<b>45</b>
