

Table of Contents

Tables Index	xiii
Figures Index	xv
1. Introduction	3
1.1. Motivation	3
1.2. Problem Statement and Hypothesis	4
1.2.1. Problem Statement	4
1.2.2. Hypothesis	4
1.3. Objectives	5
1.4. Thesis Structure	5
2. Overview of Vehicular Networks	7
2.1. Vehicular Communications	7
2.2. The IEEE 802.11p Standard	9
2.3. Signal Model of the IEEE 802.11p Data Frame	10
2.3.1. System Description	10
2.3.2. IEEE 802.11p Preamble Structure	11
2.4. Channel Estimation Techniques	12
2.4.1. Least Squares Estimation	13
2.4.2. Spectral Temporal Averaging Estimation	13
2.4.3. Constructed Data Pilots Estimation	14
3. Mobile-to-Mobile Channel Model	16
3.1. Mathematical Model of Mobile to Mobile Channels	17
3.2. Statistical Characterization of the Channel Model	21
3.2.1. Considerations	21
3.2.2. Four Dimensional Time Frequency Correlation Function	21
3.2.3. Wide sense stationary analysis	22
3.3. Single Ring Geometrical Model	23
3.3.1. Relation between AOD and AOA	24
3.3.2. Four Dimensional Time Frequency Correlation Function for the Geometrical Single Ring Model	24
3.3.3. Numerical Results	25
4. Doppler Shift Characterization of Wideband Mobile Radio Channels	29
4.1. The Doppler Shift from a Time-Frequency Analysis Perspective	29

4.1.1. Doppler Shift for Narrowband Signals	29
4.1.2. Doppler Shift Characterization for Wideband Signals	30
4.1.3. On the Frequency Dependence of the Doppler Shift	32
4.2. Influence of the Frequency-Varying DS on the Channel's Non-Stationary Characteristics	32
5. Results and Discussion	38
5.1. Stationary and non-Stationary Comparison	38
5.2. Doppler Parameter Comparison on the non-Stationary Model	40
6. Conclusions and Future Work	48
7. Annexes	50
8. Bibliography	52
