1	Introduction	1
1.1	Basic Background	1
1.2	Incentive	1
1.2.1	Pay-as-you-Go business model	2
1.3	Objectives	5
1.3.1	Main Objective	5
1.3.2	Specific Objectives	5
1.4	Scope	5
2	Background	6
2.1	Domestic Hot Water	6
2.2	Solar Irradiance, Airmass and Angle of Incidence	6
2.2.1	Solar Position	7
2.2.2	Extraterrestrial Irradiance	8
2.2.3	Air Mass	8
2.2.4	Plane of Array Irradiance	11
2.3	Photovoltaic Array Performance Models	13
2.3.1	Sandia’s photovoltaic array performance model (sapm)	14
2.3.2	NREL’s PVWATTS PV Performance Model	20
2.4	Thermoelectric Heat Pump	21
2.5	Nexol Water Boiler	25
2.6	Similarity Measures	26
2.7	Conclusions	28
3	Methodology	29
3.1	Data Acquisition	29
3.1.1	Experimental Setup	29
3.1.2	Meteorological data	31
3.1.3	Tests schedule	33
3.2	Numerical simulation	33
3.2.1	Photovoltaic array electricity generation	34
3.2.2	Stratified Tank numerical model	34
3.2.3	Model’s accuracy optimization	38
3.3	Performance Measurements	42
3.3.1	Comfort measurement	42
3.3.2	Energy saving measurements	42

3.4	Simulation of the validated model in different locations	43
3.4.1	Data sources	44
3.4.2	Performance Evaluation	45
3.4.3	Data analysis	46
3.5	Conclusions	46
4	Results	48
4.1	Experimental Results	48
4.2	Simulated Photovoltaic Array	50
4.3	Numerical model improvement and validation	52
4.4	Simulated locations	58
4.4.1	Maximum Daily Temperature	58
4.4.2	Performance Measurements	60
4.4.3	Overall assessments	70
5	Conclusions	72
	Bibliography	74
