

Contents

1	Preliminar Concepts	1
1.1	Liquid Crystals	1
1.2	The Frank-Oseen model	2
2	Ginzburg-Landau equations	4
2.1	Pitchfork Bifurcation	4
2.1.1	Degenerated Pitchfork Bifurcation	5
2.2	Vortex solutions of Ginzburg-Landau Equation	6
2.2.1	Symmetries of the Ginzburg-Landau equation	8
2.3	Energy	9
2.4	Linearized operator of Ginzburg-Landau equation around vortex solution . .	11
2.4.1	Kernel of Linearized operator around vortex solution in the plane . .	11
2.4.2	Linearized operator on a bounded domain	13
3	Anisotropic Ginzburg Landau Equation	15
3.1	Experimental Setup	15
3.2	Amplitude Equation Derivation	16
3.2.1	Linear Analysis	17
3.2.2	Weakly Nonlinear Analysis	18
3.3	Anisotropic Ginzburg Landau Equation	20
3.3.1	Fourfold symmetry	21
3.3.2	Positive Vortex Solution in Anisotropic Ginzburg-Landau	22
4	Anisotropic Vortices: Existence, Stability and Energy	24
4.1	Construction of the solution	24
4.2	Anisotropic energy	31
4.2.1	Stability	31
4.2.2	Anisotropic energy expansion of anisotropic vortex solution	32
4.2.3	Linear approximation of the perturbation	34
4.2.4	Fourier Series decomposition	36
5	Numerical Results	38
5.1	Finite element method	38
5.1.1	Introduction	38
5.1.2	Finite element method for the linear approximation of anisotropic vortex solution	39
5.1.3	Quadratic coefficient of negative anisotropic vortex solution	42

5.1.4	Numerical calculation of anisotropic Energy	43
6	Analysis for an O.D.E. system from negative anisotropic vortex	46
6.1	Introduction	47
6.2	Asymptotic behavior of solutions of the homogeneous system	48
6.2.1	The possible behaviours at zero	48
6.2.2	The possible behaviours at infinity	52
6.2.3	The homogeneous system does not admit globally bounded solutions	59
6.2.4	The fastest vanishing at zero is related with the fastest blow-up at infinity	60
6.3	Bounded solutions of the inhomogeneous system	63
	Conclusion	67
A	Invariant function subspace of the anisotropic Ginzburg-Landau equation	68
B	Computation details of the quadratic coefficient in energy expansion	70
	Bibliography	73
