

Table of contents

Chapter 1: Introduction	1
1.1 Motivation	1
1.2 First order open ended scientific questions about seismic hazard in Central Chile	5
1.3 Goals of the Thesis	5
1.3.1 Working Hypothesis and Objectives	5
1.3.2 The main objective of this thesis	5
1.3.3 The specific objectives of this Thesis	6
1.4 Central Andes geological settings	6
1.5 Southern Central Andes Cenozoic tectonic evolution	9
1.6 Main structures between 33°-34°S	11
1.6.1 Eastern flank of the Coastal Cordillera and the western limit of the Central Depression	11
1.6.2 Western flank of the Principal Cordillera	11
1.6.3 Main Principal Cordillera	13
1.7 Seismicity	17
1.7.1 Seismotectonic regionalization	17
1.7.2 Seismicity in Central Chile	19
1.7.3 Seismicity near Santiago	20
1.8 Landslides Central Chile	24
1.9 Neotectonics in Central Chile	26
1.10 A review of faults zones	31
1.11 Summary of work to date (to September 2018) on Neotectonics in Central Chile	34
1.12 Organization of the Thesis	36
Chapter 2: Methodologies	38
2.1 Source information	38
2.1.1 Geological maps	38
2.1.2 Topographic data	41

2.1.3	Satellite images	43
2.1.4	Geological data	44
2.1.5	Seismological data	44
2.2	Data analysis methodologies	44
2.2.1	Compile a potentially active structure database	44
2.2.2	Explore the potentially presence of unrecognized crustal	
2.2.3	Define the Quaternary behavior of the "new crustal faults"	48
2.2.4	Evaluate the potential seismic hazard of the structures	50
Chapter 3: Case of study of the El Arrayan fault		51
3.1	Abstract	51
3.2	Introduction	52
3.3	Methods	55
3.4	Results	56
3.4.1	Geological fault observations	56
3.4.2	Main fault zones	57
3.4.3	Remote sensing and geomorphic observations	64
3.4.4	Geometric and kinematic analysis	66
3.5	Discussion	68
3.5.1	Geometry and kinematics	68
3.5.2	Potential for Quaternary activity	69
3.5.3	Tectonic implications	71
3.5.4	Potential EAF seismic hazard	72
3.6	Conclusions	72
Chapter 4: Case of study Estero Coyanco fault		74
4.1	Abstract	74
4.2	Introduction	74
4.3	Geological settings	75
4.4	Methodology	79

4.5	Results	79
4.6	Discussion	87
	4.6.1 Fault extend	87
	4.6.2 Fault kinematics	87
	4.6.3 Fault temporality	87
	4.6.4 Fault displacement	87
	4.6.5 Regional kinematics	88
4.7	Conclusions	89
Chapter 5: Case of study El Diablo fault		90
5.1	Abstract	90
5.2	Introduction	91
5.3	Geological settings	96
5.4	Fault rock background	97
5.5	Methodologies	99
5.6	Results	99
	5.6.1 Fault zone characterization	99
	5.6.2 Kinematic analysis	107
5.7	Discussion	109
	5.7.1 Multiple kinematics	109
	5.7.2 Timing of deformation	110
	5.7.3 Kinematic model	111
5.8	Conclusions	115
Chapter 6: Faults seismic potential		116
6.1	Introduction	116
6.2	Results	117
	6.2.1 All faults	117
	6.2.2 All faults no-segmentation / Surface rupture length as a key parameter	122

6.2.3 All faults with segmentation / Surface rupture length as a key parameter	124
6.2.4 All faults no-segmentation / Rupture area as a key parameter/ Average seismogenic depth	126
6.2.5 All faults no-segmentation / Rupture area as a key parameter / Maximum seismogenic depth	128
6.3 Moment Magnitude Potential of Potentially Active Faults near Santiago, Chile summary	130
6.4 Relationship with potentially active faults and landslides	134
6.5 PGA Estimation for EAF	137
Chapter 7: Conclusions	140
7.1 Main research questions and answers	140
7.2 Implications	143
7.3 Suggestions for future work	145
Chapter 8: Bibliografy	146
Chapter 9: Appendant	164
