

Table of Contents

1. Introduction	1
1.1. Star formation	1
1.2. Rotation in clouds	2
1.3. Rotation versus Velocity dispersion	6
1.4. Vorticity and power spectrum	8
2. Vorticity and Circulation	13
2.1. Vorticity	13
2.1.1. Angular momentum and gravitational stability	16
2.2. Circulation of a fluid Γ	18
3. Circulation and numerical tools	21
3.1. Gaussian Random Fields	21
3.1.1. Definition of Gaussian Random Fields	21
3.1.2. Vector fields, vorticity and circulation	22
3.1.3. Examples and numerical tests of Gaussian Random Fields	23
3.1.4. How to compute $\sigma_{\gamma,\ell}^2$	28
3.1.5. Toy Models	31
4. Algorithm and Code	35
4.1. The Principle	35
4.1.1. The scale at which gas non-circular motions start to dominate	38
4.2. Measuring circulation γ and γ_{rot}	39
4.2.1. Two dimensional vorticity field	39
4.2.2. Smooth component	39
4.2.3. Differential component	40
4.2.4. Computing γ	40
4.3. The model for γ_{nc}	41
4.4. Deriving the parameter distributions	42
4.5. Markov Chain	44
4.5.1. Computing $\sigma_{\gamma_{\text{nc}}}$	46
5. Simulations	47
5.1. Initial conditions	48
5.1.1. Gas	48
5.1.2. Stars	48
5.1.3. Dark Matter	49

5.2. Radiative cooling	49
5.3. Star formation	50
5.4. Stellar Feedback	50
5.4.1. HII Regions	50
5.4.2. Stellar Winds and Radiation Pressure	52
5.4.3. Supernova II explosions	53
5.5. Additional Simulations	54
6. Results	57
6.1. Disk structure	57
6.2. Star formation	60
6.3. Vorticity	65
6.4. Model parameters	66
6.5. Scales at which gas dynamics transitions from galactic rotation to non-circular motions	75
6.6. Distribution of γ	75
6.7. Relation with other spatial scales	82
6.7.1. Circulation scales: λ_c and λ_{eq}	83
6.8. Power Spectrum	87
6.9. Low feedback simulations	88
6.10. Effects of changing the model	92
6.11. Different models for the random velocity field	93
6.12. Limitations and Caveats	94
6.12.1. Velocity model	94
6.12.2. Full velocity field	94
6.12.3. Surface brightness limits and recovery of velocity information	95
6.12.4. Simulations	95
Conclusions	97
Bibliography	100
