I	Tree embeddings and degree conditions	1
1	Introduction	2
1.1	Average degree	3
1.2	Spanning trees and minimum degree	4
1.3	Maximum and minimum degree	5
1.4	Trees in random graphs	7
2	Preliminaries	10
2.1	Basic notation	10
2.2	Trees	11
2.2.1	Basic results on tree embedding	11
2.2.2	Cutting trees	12
2.3	The Regularity Lemma	14
3	Embedding trees with maximum and minimum degree conditions	16
3.1	Sharpness of Conjecture 1.3.7	18
3.2	Finding a good cut vertex	21
3.3	Embedding trees in robust components	25
3.3.1	The bipartite case	26
3.3.2	The nonbipartite case	30
3.4	Improving the maximum degree bound	34
3.5	The key embedding lemma	37

3.6	Embedding trees with degree conditions	42
3.6.1	An approximate version of the $2k - \frac{k}{2}$ conjecture	42
3.6.2	An approximate version of the $\frac{2}{3}$ -conjecture	43
3.6.3	Embedding trees with maximum degree bounded by a constant	44
3.7	An approximate version of the intermediate range conjecture	45
4	On the Erdős–Sós conjecture for bounded degree trees	53
4.1	Tools	54
4.2	Small host graph	56
4.3	Using the regularity method	59
4.4	Proof of the Erdős–Sós conjecture for trees with bounded degree and dense host graph	63
4.5	Multicolour Ramsey number of bounded degree trees	65
5	Global resilience of trees in sparse random graphs	67
5.1	Szemerédi’s regularity lemma for sparse graphs	69
5.2	Tree embeddings in bipartite expander graphs	71
5.3	Cutting trees with bounded maximum degree	72
5.4	Matching structure in the reduced graph	73
5.5	Proof of Theorem 5.0.2	75
5.6	Applications in Ramsey theory	80
II	Extremal Combinatorics on Words	83
6	Introduction	84
6.1	Longest common subsequence	85
6.2	Twins in words	85
6.3	Our contributions	86
7	Universal arrays	87

7.1	Universal words	89
7.2	Universal d -arrays	91
8	Quasi-random words and limits of convergent word sequences	96
8.1	Introduction	96
8.1.1	Quasi-random words	97
8.1.2	Convergent word sequences and word limits	99
8.1.3	Testing hereditary word properties	100
8.1.4	Finite forcibility	101
8.1.5	Permutons from words limits	102
8.2	Quasi-randomness	102
8.3	Limits of word sequences	105
8.3.1	Uniqueness and t -convergence	106
8.3.2	Interval-metric and the metric space $(\mathcal{W}, d_{\square})$	107
8.3.3	Random letters from limits and compactness of $(\mathcal{W}, d_{\square})$	111
8.3.4	Random words from limits	114
8.4	Testing hereditary word properties	117
8.5	Finite forcibility	119
8.6	Regularity lemma for words	121
8.7	Permutons from words limits	123
8.8	Non-binary words.	129
9	Future perspectives	131
9.1	Longest common subsequence for generalised random words	131
9.2	Turán numbers for words	131
9.3	Twins in d -arrays	132
9.4	Universality of permutations	132
	Bibliography	135
