

Contents

1	Introduction	1
1.1	General Introduction.	1
1.1.1	Crystallography.	2
1.1.2	Mathematical point of view.	6
1.2	Our contributions.	9
1.3	Outline of the text.	14
2	Notations and main concepts	17
2.1	Delone sets.	17
2.1.1	Meyer sets and address map.	18
2.2	Dynamical systems.	18
2.2.1	Hull systems and transverse groupoid.	19
2.2.2	Continuous eigenvalues.	20
2.3	Cut and project scheme and inter-model sets.	22
2.3.1	Torus parametrization.	25
3	Euclidean Model sets and continuous eigenvalues for Meyer sets	26
3.1	The Address system.	26
3.1.1	Defining a cocycle on the groupoid.	27
3.1.2	Proof of Proposition A.	29
3.2	Proof of Theorem A.	31
3.2.1	Necessary condition.	31
3.2.2	Sufficient condition.	33
3.3	Proof of Main Technical Lemma.	36
3.3.1	The optimal CPS and the optimal window	36
3.3.2	Proof of Main Technical Lemma'	38
4	Eigenvalues for linearly repetitive Meyer systems	43
4.1	Introduction.	43
4.2	Proof of Theorem D.	46
5	Examples	52
5.1	Almost linear sequences.	52
5.2	Two examples of Meyer sets in the real line.	55
5.2.1	A Meyer set in the real line with two continuous eigenvalues.	56
5.2.2	A Meyer set in the real line with one continuous eigenvalue.	56
5.3	Meyer sets from primitive, Pisot substitutions.	57

5.4	Meyer sets from a sequence of substitutions.	58
5.4.1	Rationally independent lengths.	59
5.4.2	Rationally dependent lengths.	62
6	Future work	63
6.1	Eigenvalues for Bratteli diagrams from hull systems.	63
6.2	Eigenvalues for Groupoids.	66
6.3	Dynamical systems and C^* -algebras.	68
7	Appendix	70
	Bibliography	74
