Contents

1. Introduction **1**
- 1.1. Background . . . 1
- 1.2. Motivation . . . 2
- 1.3. Objectives . . . 3
  - 1.3.1. Main objectives . . . 3
  - 1.3.2. General Objectives . . . 3
- 1.4. Previous research . . . 3
  - 1.4.1. Renewal cycle and most benefit renewal methodology . . . 3
  - 1.4.2. Performance forecasting methodology . . . 4

2. Probabilistic Framework for Risk Quantification **6**
- 2.1. Modeling Water Network Performance . . . 7
  - 2.1.1. Construction and resolution of the closed network problem . . . 7
- 2.2. Risk Quantification . . . 8
- 2.3. Performance Metrics Towards Risk . . . 9
  - 2.3.1. Reliability, Vulnerability and Resilience . . . 9
  - 2.3.2. Reliability based on pressure . . . 10
  - 2.3.3. Reliability based on demand . . . 10
  - 2.3.4. Vulnerability . . . 11
  - 2.3.5. Resilience . . . 11
  - 2.3.6. Sustainability . . . 12
  - 2.3.7. Meshedness . . . 12
  - 2.3.8. Betweenness centrality . . . 12
  - 2.3.9. Entropic degree . . . 13
  - 2.3.10. Modified entropic degree . . . 13
- 2.4. Behaviour of the water network for known failure rates . . . 14

3. Introducing Aging in the Risk Assessment Framework **15**
- 3.1. Pipe roughness as a function of time and initial roughness . . . 15
- 3.2. Life-cycle Performance . . . 16

4. Computational Considerations **17**

5. Water Distribution Network Case Study **19**
- 5.1. Network Characterization . . . 19
- 5.2. Hydraulic Analysis . . . 20
- 5.3. Creation of Hydraulic Models . . . 21
- 5.4. Critical path estimation . . . 22

5.5. Network Performance Analysis under Seismic Risk and Ageing Deterioration 22

6. Results Analysis and Discussion **27**

7. Conclusions **29**

Bibliography **31**
