

Contents

Introduction	1
1 Preliminaries	4
1.1 The main problem: Signal Reconstruction	4
1.2 The Fourier Transform	5
1.3 Bandlimited Functions	6
1.4 Sinc Kernel and the Sampling Theorem	7
1.5 Prolate Spheroidal Wave Functions	9
1.5.1 Priors and restrictions over Band-Limited functions	10
1.6 Gaussian Processes and Kernel Hilbert Spaces	11
1.6.1 Definitions	11
1.6.2 Posterior Variance as certain worst-case error	15
2 Sampling schemes and how to work with real-world signals	17
2.1 Nyquist-Limit	17
2.2 Non-uniform sampling	17
2.3 Sampling schemes	18
2.3.1 Uniform sampling	18
2.3.2 Randomized sampling	20
2.3.3 Jittered sampling	20
2.3.4 Additive Sampling	21
3 Applications	23
3.1 Low-pass filtering as Bayesian inference	23
3.1.1 Likelihood and model fitting	25
3.1.2 Filtering as Posterior Inference	25
3.1.3 Extensions	26
3.1.4 Implementation	27
3.2 Simulation	28
3.2.1 A synthetic time series with line spectra	28
3.3 An experiment on sampling schemes	30
3.4 Application: Finding an optimal sampling scheme using Bayesian Optimization	32
3.4.1 Setting	32
3.5 Compressed sensing: Multi-band signal reconstruction using the sinc function	34
Conclusion	39
