<b>I</b>	<b>Convergence of continuous inertial dynamics</b>	<b>1</b>
<b>1</b>	<b>Introduction</b>	<b>2</b>
1.1	Notation and Preliminaries . . . . .	3
1.2	Historical aspects . . . . .	8
1.3	The main problem . . . . .	10
<b>2</b>	<b>Study of the trajectories of a general equation</b>	<b>11</b>
2.1	Weak convergence of the trajectories . . . . .	12
2.1.1	Proof of the technical lemma . . . . .	15
2.2	About the hypotheses . . . . .	18
2.2.1	Necessity of the hypothesis $(H_2)$ . . . . .	18
2.2.2	Sufficient condition for $(H_1)$ . . . . .	19
2.3	Corollaries of Theorem 2.2 . . . . .	20
<b>3</b>	<b>Main result</b>	<b>25</b>
3.1	Some particular cases . . . . .	30
3.1.1	The case $\gamma(t) = at^p$ for $p > -1$ . . . . .	31
3.1.2	The case $\gamma(t) = \frac{a}{t}$ . . . . .	32
3.2	Comparison a with similar result . . . . .	33
<b>4</b>	<b>Connection with second part</b>	<b>34</b>
<b>II</b>	<b>Convergence of discrete inertial scheme</b>	<b>36</b>
<b>5</b>	<b>Introduction</b>	<b>37</b>
5.1	Preliminars . . . . .	37
5.2	Main problem . . . . .	38
5.3	Historical aspects . . . . .	40
<b>6</b>	<b>Convergence of inertial algorithms based on averaged operators</b>	<b>41</b>
<b>7</b>	<b>Primal-Dual Splitting algorithm</b>	<b>44</b>
7.1	Numerical experiences . . . . .	45
7.1.1	Wavelet-based denoising model . . . . .	45
7.1.2	TV-based denoising model . . . . .	47

<b>8</b>	<b>A Three-Operator splitting scheme</b>	<b>56</b>
8.1	Numerical experiences . . . . .	57
8.1.1	Matrix completion problem . . . . .	57
<b>9</b>	<b>Conclusions and perspectives</b>	<b>63</b>
	<b>Bibliography</b>	<b>64</b>
	<b>Appendices</b>	<b>69</b>
<b>A</b>	<b>Important lemmas</b>	<b>70</b>
