1	Introduction	1
1.1	Motivation	2
1.2	Problem definition	3
1.3	Hypotheses	3
1.4	Objectives	4
1.4.1	General Objective	4
1.4.2	Specific Objectives	4
1.5	Contributions	4
1.6	Publications	5
1.7	Outline of the thesis	5
2	Literature review	7
2.1	Vehicular Networks	7
2.1.1	Applications and services	8
2.1.2	Communication technologies	9
2.2	Cognitive Vehicular Networks	13
2.3	Dynamic Spectrum Access for Vehicular Networking	14
2.3.1	Available spectrum estimation mechanisms	16
2.3.2	Spectrum estimation based on the infrastructure	19
2.3.3	Spectrum estimation based on the vehicles	20
2.3.4	Resource allocation mechanisms	21
2.4	IEEE standard 802.22	22
2.5	Secondary opportunistic networks over TVWS and coexistence	25
2.6	Discussion	26
3	Coexistence of Cognitive Networks for Vehicular Communications on TV White Spaces	28
3.1	Introduction	28
3.2	Modeling primary and secondary TV bands users for vehicular networking on TVWS	29
3.2.1	TV primary users	30
3.2.2	White-Fi network description and traffic modeling	32
3.2.3	Vehicular network modeling	35
3.3	Coexistence between fixed and mobile (vehicular) secondary groups on the IEEE standard 802.22	37

3.4	White Space Resource Sharing (WSRS) Mechanism	39
3.4.1	System's operation	39
3.4.2	Resource allocation in WSRS	40
4	Evaluation and Results	44
4.1	Feasibility study of TVWS spectrum sharing for vehicular communications on TVWS spectrum	44
4.1.1	Evaluation scenario	44
4.1.2	Simulation Results	46
4.1.3	Discussion	50
4.2	Evaluation of Opportunistic Access Strategies for Vehicular Networking Over TVWS spectrum	52
4.2.1	Scenario of Study	53
4.2.2	Simulation results	55
4.2.3	Discussion	57
4.3	Performance Evaluation of the White Space Resource Sharing mechanism . .	57
4.3.1	Evaluation scenario	57
4.3.2	Simulation Results	60
4.3.3	Discussion	67
5	Conclusions	70
5.1	Major Research Results	70
5.2	Future Work	72
6	Appendix	74
	Bibliography	75
