Table of Contents

1. Introduction **1**

2. Tropospheric NO_2 Column Density **3**

2.1. Satellite retrieval method . . . 3

2.2. Satellite data sources . . . 3

2.3. Study domain selection . . . 5

3. Convolutional Neural Networks for Super Resolution **7**

3.1. Single-Image Super Resolution problem . . . 7

3.2. Convolutional Neural Networks . . . 7

3.2.1. Convolution operation . . . 7

3.2.2. Pooling . . . 8

3.3. Application to SR problem . . . 9

3.4. Uncertainties in Neural Network models . . . 10

4. Data and Methodology **11**

4.1. Data and pre-processing . . . 11

4.1.1. Gap filling method . . . 12

4.2. Stochastic SRCNN model . . . 12

4.3. Training method . . . 14

4.4. Evaluation experiments . . . 15

5. Results and Discussion **18**

5.1. Architectures of models . . . 18

5.2. Performance evaluation . . . 19

5.2.1. Evaluation of column density data maxima . . . 22

5.2.2. Uncertainty estimation . . . 23

5.3. Robustness of the SSRCNN approach . . . 24

5.4. Application to OMI NO_2 data . . . 25

6. Conclusions **27**

Bibliography **29**

Appendices **36**

A. Loss function gradients **36**

A.1. Maximum Likelihood for Gaussian distribution 36

A.2. Mean Squared Error 37

B. Parameterisation of models' architectures **38**

C. SSRCNN prediction examples **40**
