

Table of Contents

1. Introduction	1
1.1. Brief description of <i>Woodtech</i>	1
1.2. Motivation	2
1.3. Problem definition	3
1.4. Goals	4
1.5. Document structure	4
2. Basic Concepts	5
2.1. Stereo vision	5
2.2. Stereo camera and disparity	5
2.3. Epipolar constraint	6
2.4. Rectification and Calibration	7
3. State of the art	10
3.1. Standard stereo algorithm	10
3.2. Matching cost computation	10
3.2.1. Absolute differences (AD)	12
3.2.2. Sum of absolute differences (SAD)	13
3.2.3. BirchField Tomasi (BT)	13
3.2.4. Pixel dissimilarity with Deep Learning	14
3.3. Cost aggregation	17
3.3.1. Semi Global Matching (SGM)	17
3.3.2. Cross Based Cost Aggregation (CBCA)	18
3.4. Disparity selection	20
3.5. Disparity refinement	20
3.5.1. Left-Right consistency check	20
3.5.2. Sub-pixel enhancement	20
3.5.3. Median filter	20
3.6. Pre filtering	21
4. Implementation Methodology	22
4.1. Matching cost computation	22
4.1.1. BT configuration	22
4.1.2. CNN configuration	23
4.2. Cost aggregation	24
4.3. Disparity selection	25
4.4. Disparity refinement	25
4.5. Summary	25

5. Evaluation Methodology	27
5.1. Middlebury dataset	27
5.2. KITTI dataset	28
5.3. Truckload images	29
5.4. Error computation	30
6. Results and Analysis	33
6.1. Middlebury dataset	34
6.2. KITTI dataset	37
6.3. Truck images	40
6.4. Improved results: pre-filtering of the input images	44
6.5. Summary	46
7. Conclusion and Future Work	48
Bibliography	50
Annexes . Error tables	52
A.1. Error table for Middlebury dataset	52
A.2. Error table for KITTI dataset	53
