

Content

1	Introduction	1
2	Preliminaries	3
2.1	Preliminaries on Banach algebras	3
2.1.1	$*$ -Algebras and Banach $*$ -algebras	3
2.1.2	The Spectrum	6
2.1.3	Representations	7
2.1.4	Multipliers of a C^* -algebra	7
2.2	Preliminaries on Topological groups	9
2.2.1	Topological groups	9
2.2.2	The Haar measure	11
2.2.3	Fell bundles, partial group actions and the cross-sectional algebra	13
3	Topological Dynamics of Groupoid Actions	16
3.1	Groupoids and groupoid actions	17
3.1.1	The framework	17
3.1.2	Recurrence sets	19
3.2	Some examples	21
3.2.1	Equivalence relations	21
3.2.2	Group actions	21
3.2.3	The Deaconu-Renault groupoid	22
3.2.4	The action groupoid of a groupoid action	23

3.2.5	Groupoid pull-backs	23
3.3	Topological transitivity	24
3.3.1	The standard notions	24
3.3.2	Weak pointwise transitivity	27
3.4	Minimality and almost periodicity	28
3.4.1	Fixed points	28
3.4.2	Periodic and almost periodic points	29
3.4.3	Compact orbits	30
3.4.4	Minimal sets	32
3.5	Factors	35
3.6	A disappointing notion: mixing	38
4	Morphisms of Groupoid Actions and Recurrence	39
4.1	Algebraic morphisms	40
4.1.1	Algebraic morphisms of groupoid actions	40
4.1.2	Dynamical properties under algebraic morphisms of groupoid actions	44
4.2	Some extra remarks on algebraic morphisms	46
5	On symmetry of L^1-Algebras Associated to Fell Bundles	50
5.1	The main results	51
5.2	Discretization of representations	53
5.3	Proof of Theorem 5.1.2	57
5.4	Twisted partial group actions and crossed products	58
6	Conclusions and future work	60
	Bibliography	61
