Table of content

1. Introduction **1**

2. Literature review **3**
2.1. Guitar-making development . . . 3
2.2. Mechanical metamaterials . . . 7
2.3. Theory of elasticity for wooden plates . . . 8
2.3.1. PDE's for the eigenvalue problem . . . 8
2.3.2. Existence of solutions . . . 9
2.3.3. Stress-strain relation for orthotropic materials . . . 9

3. Methodology **11**
3.1. Research objectives . . . 11
3.2. Setup . . . 11
3.3. Quantities of interest . . . 12
3.4. Parametrization . . . 13
3.5. Formulas for effective properties . . . 14
3.6. Simulation procedures . . . 15

4. Homogeneous study **16**
4.1. Building homogeneous patterns . . . 16
4.2. Effect of the volume fraction v . . . 16
4.3. Effect of the aspect ratio k . . . 17
4.4. Effect of the angle variation θ . . . 18
4.5. Phase plane $E_L - E_R$ . . . 20

5. Heterogeneous study **21**
5.1. Building heterogeneous geometries . . . 21
5.1.1. Symmetries . . . 21
5.1.2. Choosing void vectors . . . 22
5.2. Results combining patterns with the same symmetry . . . 24
5.3. Results combining patterns with different symmetries . . . 27

6. Algorithmic optimization **31**
6.1. Description . . . 31
6.2. Implementation . . . 32
6.3. Results . . . 33
6.3.1. Matching between the same wood species . . . 34
6.3.2. Wood matching between different species . . . 34

7. Conclusion **36**

Bibliography **38**

Annexes **43**
Annexed A: Mode shapes for homogeneous patterns with different angles 43
Annexed B: Experimental validation of homogeneous results 44
Annexed C: Generalization to different woods 45
Annexed D: Generalization to different plate size 46
