

Table of CONTENT

Resumen	ii
Abstract	iii
Acknowledgements	iv
1. Introduction	1
1.1 Hypothesis and objectives	1
1.2 Thesis structure	2
2. Gravity flow in cave mining	3
2.1 Flow zones.....	3
2.1.1 Particle size distribution	5
2.1.2 Drawpoint width.....	7
2.1.3 Interlocking friction angle	7
2.1.4 Rock quality	8
2.1.5 Fragment shape.....	8
2.1.5 Moisture	9
2.2 Mechanisms of gravity flow	10
2.2.1 Interactive draw	11
2.2.1 Far field and near field	12
2.3 Fine material migration.....	14
2.3.1 Dilution entry mechanisms.....	15
2.3.3 Inrushes	17
2.4 Stress in granular material	19
2.4.1 Stress in Block Caving	21
2.5 Gravity flow modeling using cellular automata	22
2.5.1 FlowSim	22
3. Granular material fragmentation in Block Caving	25
3.1. Fragmentation stages in block caving	25
3.1.1 Secondary fragmentation.....	27
3.2 Fragmentation prediction in block caving.....	32
3.3 Hang-ups: Coarse arches.....	33
3.3.1 Mine operational problems.....	35
3.2.3 Hang-up detection.....	35

4 Summary of the literature review	37
5 Papers	38
5.1 Paper 1: <i>Comparison of normalized and non-normalized Block Caving Comminution Models. ...</i>	38
5.2 Paper 2: <i>Experimental quantification of granular material fragmentation due to travel distance.</i>	38
5.3 Paper 3: <i>Experimental quantification of vertical pressures during gravity flow in block caving...</i>	38
5.4 Paper 4: <i>Stress modelling using cellular automata for block caving application.</i>	38
5.5 Paper 5: <i>Fine material migration modelled by cellular automata.</i>	38
Paper 1: Comparison of normalized and non-normalized Block Caving Comminution Models	40
Paper 2: Experimental quantification of granular material fragmentation due to travel distance	49
Paper 3: Experimental quantification of vertical stresses during gravity flow in block caving..	58
Paper 4: Stress modelling using cellular automata for block caving applications	75
Paper 5: Fine material migration modelled by cellular automata	90
6 General conclusions	101
7 Bibliography	102
