

Table of Content

1. Introduction	1
1.1. Motivation	1
1.2. Problem Statement	4
1.3. Hypothesis	5
1.4. Objectives and Scope	6
1.4.1. Overall Objective	6
1.4.2. Specific Objectives	6
1.5. Methodology and Tools	7
1.5.1. Tools	7
1.6. Contributions and Thesis Structure	8
2. Background	9
2.1. Vehicular Communication Networks	9
2.2. IEEE 802.11p-based technologies	10
2.2.1. Enhanced Distributed Channel Access (EDCA)	12
2.3. Cellular - Vehicle-to-Everything (C-V2X)	13
2.3.1. Description of C-V2X	13
2.3.2. Channel aspects	16
2.3.3. Sensing-Based Semi-Persistent Scheduling (SB-SPS)	17
2.4. Network Architecture	18
2.4.1. Reference Architecture of DSRC and C-ITS	19
2.4.2. Reference Architecture of C-V2X	21
2.5. Heterogeneous Vehicular Networks	22
2.5.1. General Aspects	22
2.5.2. Basic Network Architecture	24
2.6. Machine Learning Tools	26
3. Related Work	28
3.1. Towards VRU inclusion	28
3.1.1. Works on VRU requirements and current standardization	29
3.1.2. VRU communication systems	31
3.1.3. VRU Context-Based Transmissions	34
3.2. HetVNETs Approaches	35
3.3. Machine Learning in Connected Vehicles	40
4. Proposed System	45
4.1. System Model	45

4.2.	VARIATE	46
4.2.1.	General Aspects	46
4.2.2.	Metrics	46
4.2.3.	Algorithm	48
4.3.	Simulation Setup and Experiments	54
4.3.1.	Description of the Scenario	55
4.3.2.	Experiments	55
5.	Results and Discussion	59
5.1.	Experiment A: Non-heterogeneous approaches	59
5.2.	Experiment B: VARIATE comparison	63
5.3.	Experiment C: VARIATE sensitivity analysis.	68
6.	Conclusion	73
	Bibliography	74
	Annexed	85
